1950 No. 1

GENERAL REGISTER OFFICE

THE REGISTRAR GENERAL'S WEEKLY RETURN FOR ENGLAND AND WALES

BIRTHS AND DEATHS, INFECTIOUS DISEASES, WEATHER

WEEK ENDED

SATURDAY, 7th JANUARY, 1950

Crown Copyright Reserved.

LONDON: HIS MAJESTY'S STATIONERY OFFICE
1950

Sixpence net

NOTES

1. General.—The figures in this Return are provisional. Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office, and Astronomer Royal.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

SPECIAL NOTES

The following changes are effective as from this Return:—

1. The numbers of deaths now *include* non-civilians.

2. The deaths shewn are classified according to the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. (*see* also footnote to Table III).

3. In Table IV, the diseases formally shewn under Columns, D, E, F and G, have been modified in accordance with the provisions of the Public Health (Acute poliomyelitis, acute encephalitis, and meningococcal infection) Regulations, 1949.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available:—

Monthly Deaths from smallpox—about the fourth week following the month.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

NEO-NATAL MORTALITY, ENGLAND AND WALES, 1948

The following information is included in this issue in advance of publication in the Registrar General's Statistical Review, parts I and II, for 1948:—

		Jan.	Feb.	March	April	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.
Deaths of Infants under 4 weeks.	M.	864	865	761	789	729	713	672	693	680	689	712	710
	F.	609	609	588	614	520	473	483	493	492	520	498	521
Live Births.	M.	35,186	33,293	35,814	34,773	35,328	33,088	34,512	32,341	31,818	31,432	29,809	31,718
	F.	33,216	31,477	33,837	32,882	33,166	31,713	32,501	30,219	30,333	29,536	27,943	29,371

The annual rates per 1,000 related live births, based on the numbers of deaths *registered* in the year, were:—

Males 22.20; Females 17.08; Persons 19.72.

ABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) **London.**

(b) **Great Towns in the aggregate.**

(*See Notes on page* 2)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

Week ended:—	Oct. 29	Nov. 5	Nov. 12	Nov 19	Nov. 26	Dec. 3	Dec. 10	Dec. 17	Dec. 24	Dec. 31	Jan. 7	Totals from 1st Week of year, in Great Towns *ONLY*

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate, e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 7th January, 1950, with totals from the first week of the year to date. } **London.**

(*See Notes on page 2*)

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 7th January, 1950. | **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page 2*)

Note:—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. B	Meningococcal infection. D	Acute poliomyelitis EF: Paralytic E	Acute poliomyelitis EF: Non-paralytic F	Acute encephalitis GK: Infective G	Acute encephalitis GK: Post Infectious K	Typhus fever. H	Relapsing fever. I	Continued fever. (London only). J	Dysentery. L	Ophthalmia neonatorum. M	Puerperal pyrexia and Puerperal fever. N C	Smallpox. O	Paratyphoid fever P	Typhoid fever R	Food poisoning. S

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

TABLE VII.—*continued.*

SOUTHPORT
GREAT BRITAIN
PAID
13 JAN 50

DATE. January		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	1	0.0	7.9	Overcast. Little cloud periods 1h. until 5h. and 12½h.—19h. Hoar frost in morning. Mist until 9½h. then fog.
Monday	2	0.0	7.9	Overcast. Fog until 2h. Drizzle from 20h. Fresh wind 8h. until 18h.
Tuesday	3	0.0	8.0	Overcast. Drizzle until 6h., damping until 14½h., drizzle until 18h. then slight rain. Mist in morning.
Wednesday ..	4	0.0	8.0	Overcast until 13½h. then nearly so. Slight rain until 3½h.
Thursday	5	0.4	8.0	Overcast until 9h., very cloudy generally until 21h. then few clouds. Rain or slight rain 17¾h. until 20h. Fresh wind from 18h.
Friday	6	1.9	8.0	Little cloud until 8½h., partially cloudy until 12h. Sky veiled until 16h. then overcast. Shower 9h. Fresh wind until 19h.
Saturday	7	0.0	8.1	Overcast generally until 18½h., cloudy until 20½h., cloudless by 21h. Clouding 23¼h.
		Sum 2.3	Sum 55.9	
No. of Column		5	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer increased from 30.24 ins. at the beginning of the week to 30.30 ins. by 10¾h. on January 1; decreased to 29.37 ins. by 19¼h. on January 5; increased and was 29.82 ins. by midnight on January 7.

F.415 K.13. 1/50. Wt. 5—69. R.J. & Co. S. G.437 (Emergency). 70—9999 PRINTED IN GREAT BRITAIN.

1950

Sixpence net

NOTES

1. General.—The figures in this Return are provisional. Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office, and Astronomer Royal.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts failing entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

SPECIAL NOTES

The following changes became effective as from Return No. 1, 1950 :—

1. The numbers of deaths now *include* non-civilians.

2. The deaths shewn are classified according to the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. (*see* also footnote to Table III).

3. In Table IV, the diseases formally shewn under Columns, D, E, F and G, have been modified in accordance with the provisions of the Public Health (Acute poliomyelitis, acute encephalitis, and meningococcal infection) Regulations, 1949.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available:—

Monthly Deaths from smallpox—about the fourth week following the month.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

ENGLAND AND WALES

BIRTHS AND DEATHS registered in the Quarter ended 31st December, 1949, and in the year 1949, with comparative figures for four earlier years. (The customary analysis will appear in the Quarterly Return in due course).

	Live Births.		Stillbirths.		Deaths (including non-civilians).		Deaths of Infants under 1 year.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate, e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 14th January, 1950, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 14th January, 1950. | **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page* 2)

Note:—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. B	Meningococcal infection. D	Acute poliomyelitis: Paralytic E	Acute poliomyelitis: Non-paralytic F	Acute encephalitis: Infective G	Acute encephalitis: Post Infectious K	Typhus fever. H	Relapsing fever. I	Continued fever. (London only). J	Dysentery. L	Ophthalmia neonatorum. M	Puerperal pyrexia and Puerperal fever. N C	Smallpox. O	Paratyphoid fever P	Typhoid fever R	Food poisoning. S

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

TABLE VII.—*continued.*

DATE. January		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	8	0.0	8.1	Overcast generally and clearing 23½h. Misty.
Monday	9	0.0	8.1	Cloudless until 2h. then very cloudy. Little cloud periods 15½h.—20h. and 21¼h.—22h. Mist or fog. Dew in morning.
Tuesday	10	0.0	8.1	Overcast or nearly so. Mist or slight mist. Dew in morning.
Wednesday ..	11	0.0	8.2	Overcast and misty throughout. Intermittent damping 9h.—18h.
Thursday	12	0.0	8.2	Overcast, clearing 0½h. to nearly cloudless by 1½h., clouding 23¼h. Cloudy period 15h.—19½h. Fog 9½h.—18h., thick between 11h. and 15h.
Friday	13	0.0	8.2	Overcast or nearly so. Few clouds period 22¾h.—23¾h. Damping 12h.—13h. Misty.
Saturday	14	0.0	8.3	Overcast generally. Drizzle 5h.—5¾h. then damping until 12½h. Mist 9h. until 20h. Gloom in forenoon.
		Sum 0.0	Sum 57.2	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 29.82 ins. at the beginning of the week to 29.72 ins. by 8h. on January 9; increased to 30.42 ins. by 9¾h. on January 12; decreased to 30.10 ins. by 14½h. on January 13; increased to 30.20 ins. by 12h. on January 14; decreased and was 30.15 ins. by midnight on the same day.

F.415 K.13. 1/50. Wt. 5—69. R.J. & Co. S. G.437 (Emergency). 70—9999 PRINTED IN GREAT BRITAIN.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables 1, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office, and Astronomer Royal.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns" =London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included.*

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review. Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

SPECIAL NOTES

The following changes became effective as from Return No. 1, 1950:—

1. The numbers of deaths now *include* non-civilians.

2. The deaths shewn are classified according to the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. (*see* also footnote to Table III).

3. In Table IV, the diseases formally shewn under Columns, D, E, F and G, have been modified in accordance with the provisions of the Public Health (Acute poliomyelitis, acute encephalitis, and meningococcal infection) Regulations, 1949.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available:—

Monthly Deaths from smallpox—about the fourth week following the month.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

ABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) **London.**

(b) **Great Towns in the aggregate.**

(*See Notes on page* 2)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate, e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 21st January, 1950, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 21st January, 1950. — **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page 2*)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

TABLE VII.—*continued.*

DATE. January		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	15	0.0	8.3	Overcast generally. Slight rain 15½h. until 16½h.
Monday	16	3.2	8.4	Overcast until 4h., little cloud until 11½h. partially cloudy until 16½h. then overcast. Fog 8½h. until 10h. Slight drizzle 18½h. until 20½h.
Tuesday	17	0.9	8.4	Variably cloudy until 6h. then overcast. Cloudy period 10h. until 18h. Occasional rain 6½h. until 9h. and slight rain from 19h. Fresh wind 6½h. until 12h.
Wednesday ..	18	3.9	8.4	Overcast. Little cloud period 10½h. until 18h.
Thursday	19	0.2	8.5	Overcast generally. Occasional slight snow 8¼h. until 13½h.
Friday	20	0.0	8.5	Overcast. Cloudless period 3h. until 7h. Very slight snow at times 9h. until 13h.
Saturday	21	2.9	8.6	Overcast until 7½h., generally cloudy until 23½h. then overcast. Mist and hoar frost in morning.
		Sum 11.1	Sum 59.1	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 30.15 ins. at the beginning of the week to 29.68 ins. by 20½h. on January 16; increased to 30.35 ins. by 22½h. on January 18; decreased to 30.20 ins. by 20½h. on January 20; increased and was 30.25 ins. by midnight on January 21.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables 1, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office, and Astronomer Royal.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

SPECIAL NOTES

The following changes became effective as from Return No. 1, 1950:—

1. The numbers of deaths now *include* non-civilians.

2. The deaths shewn are classified according to the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. (*see* also footnote to Table III).

3. In Table IV, the diseases formally shewn under Columns, D, E, F and G, have been modified in accordance with the provisions of the Public Health (Acute poliomyelitis, acute encephalitis, and meningococcal infection) Regulations, 1949.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available:—

Monthly Deaths from smallpox—about the fourth week following the month.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

Smallpox

There were no deaths from Smallpox during the month of December.

ABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) **London.**
(b) **Great Towns in the aggregate.**

(*See Notes on page 2*)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate, e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 28th January, 1950, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 28th January, 1950. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page 2*)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. B	Meningococcal infection. Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

TABLE VI.—Air Temperature and Rainfall in the week ended 28th January, 1950. } Certain Great Towns in England and Wales and four Scottish and Irish Towns.

DATE. January		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	22	0.0	8.6	Overcast. Mist in morning, fog from 11h. until 17h., then slight mist. Slight drizzle 7¼h. until 9h.
Monday	23	1.6	8.7	Overcast until 10h., few clouds until 18h., little cloud until 23½h., then clouding up.
Tuesday	24	0.6	8.7	Generally cloudy until 16h. then overcast. Hoar frost in morning.
Wednesday ..	25	0.0	8.8	Overcast generally, gloom in afternoon.
Thursday	26	0 7	8.8	Nearly overcast until 1½h., little cloud until 7h., cloudy until 12h. cloudless by 12½h. Hoar frost in morning. Fog from 8h.
Friday . .	27	0.3	8.9	Cloudless until 14¼h., overcast by 14¾h. Hoar frost throughout. Fog clearing from 22½h. Rime in morning.
Saturday	28	0.0	8.9	Overcast generally until 21h., cloudless by 21½h. Hoar frost throughout.
		Sum 3.2	Sum 61.4	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 30.25 ins. at the beginning of the week to 29.90 ins. by 14¾h. on January 25; increased to 30.11 ins. by 11h. on January 27; decreased and was 29.96 ins. by midnight on January 28.

LONDON: HIS MAJESTY'S STATIONERY OFFICE
1950

Sixpence net

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables 1, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office, and Astronomer Royal.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

SPECIAL NOTES

The following changes became effective as from Return No. 1, 1950:—

1. The numbers of deaths now *include* non-civilians.

2. The deaths shewn are classified according to the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. (*see* also footnote to Table III).

3. In Table IV, the diseases formally shewn under Columns, D, E, F and G, have been modified in accordance with the provisions of the Public Health (Acute poliomyelitis, acute encephalitis, and meningococcal infection) Regulations, 1949.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available:—

Monthly Deaths from smallpox—about the fourth week following the month.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

Estimates of Births

(a) Final estimate of live births to be expected in the **quarter ending 31st March, 1950** **186,000**

(b) Provisional estimate of live births to be expected in the **quarter ending 30th June, 1950** **183,000**

In the above estimates regard has been had to (1) sample returns of the number of special ration books issued to expectant mothers by the Ministry of Food, and (2) the recent trend of registered live births. The sample comprises some 200 Food Office areas containing about 25 per cent. of the population.

TABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) **London.**

(b) **Great Towns in the aggregate.**

(*See Notes on page* 2)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate, e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 4th February, 1950, with totals from the first week of the year to date. } **London.**

(*See Notes on page 2*)

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

TABLE VII.—*continued.*

DATE. January		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	29	1.8	9.0	Cloudless, except for thin cloud period 10h. until 18h. Fog in morning. Hoar frost throughout.
Monday	30	0.0	9.0	Cloudless until 2h., soon becoming overcast. Slight rain 10h. until 12h., and rain from 20½h. Hoar frost in morning. Mist from 10h.
Tuesday	31	0.0	9.1	Overcast throughout. Frequent rain until 23¼h. Mist throughout.
February				
Wednesday ..	1	0.0	9.1	Overcast generally. Mist or fog in morning. Rain or slight rain 11¼h. until 22¾h. Wind rising 11h., strong by 13h., abating from 23h.
Thursday	2	0.0	9.2	Overcast, except for few clouds period 2½h. until 6½h. Rain, heavy at times from 14h. Wind rising 17h., moderate gale by 19h. Strong wind from 23h.
Friday . ..	3	0.5	9.2	Overcast generally. Occasional rain until 13¾h. Fresh or strong wind until 5h., gale force by 8h. Strong wind 12h. until 14h., fresh until 17h.
Saturday	4	2.6	9.3	Overcast until 8h., then very cloudy. Rain 19¼h. until 20¼h.
		Sum 4.9	Sum 63.9	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 29.96 ins. at the beginning of the week to 29.46 ins. by 6½h. on January 31; increased to 29.60 ins. by 7¾h. on February 1; decreased to 29.31 ins. by 20¼h. on February 1; increased to 29.61 ins. by 9¾h. on February 2; decreased to 29.16 ins. by 8¼h. on February 3; increased to 29.52 ins. by 1h. on February 4; decreased and was 29.23 ins. by midnight on the same day.

THE REGISTRAR GENERAL'S
WEEKLY RETURN FOR
ENGLAND AND WALES

BIRTHS AND DEATHS, INFECTIOUS DISEASES, WEATHER

WEEK ENDED

SATURDAY, 11th FEBRUARY, 1950

Crown Copyright Reserved.

LONDON: HIS MAJESTY'S STATIONERY OFFICE
1950

Sixpence net

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables 1, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office, and Astronomer Royal.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns" =London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

SPECIAL NOTES

The following changes became effective as from Return No. 1, 1950:—

1. The numbers of deaths now *include* non-civilians.

2. The deaths shewn are classified according to the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. (*see* also footnote to Table III).

3. In Table IV, the diseases formally shewn under Columns, D, E, F and G, have been modified in accordance with the provisions of the Public Health (Acute poliomyelitis, acute encephalitis, and meningococcal infection) Regulations, 1949.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available:—

Monthly Deaths from smallpox—about the fourth week following the month.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.

Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

TABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) **London.**

(b) **Great Towns in the aggregate.**

(*See Notes on page* 2)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term " Influenza " is mentioned on the certificate, e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 11th February, 1950, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 11th February, 1950. — **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page 2*)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

DATE. February		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	5	3.8	9.4	Cloudy until 5h., little cloud until 11h., overcast by 13h. Rain or slight rain 14¾h. until 20½h. Strong wind 3h. until 7h.
Monday	6	0.0	9.4	Overcast until 15h., partially cloudy by 16h. Cloudless from 22½h. Rain 5 h. until 7½h. Mist in morning.
Tuesday	7	0.7	9.5	Cloudless until 6½h., cloudy until 12½h. then overcast. Little cloud from 21½h. Drizzle 17¼h. until 19h.
Wednesday ..	8	2.1	9.5	Little cloud until 1h., very cloudy generally until 20½h., cloudless by 21h. Rain about 3h. and 17½h.
Thursday	9	0.0	9.6	Cloudless until 2h., overcast by 2½h. Hoar frost in early morning. Drizzle 6½h. until 9½h., then general rain until 21½h. Strong wind from 19h.
Friday	10	0.0	9.7	Overcast until 16½h. generally cloudy until 23h. then cloudless. Drizzle at times 5½h. until 13½h. then rain until 16¼h. Strong wind throughout.
Saturday	11	2.9	9.7	Cloudless until 5h., generally cloudy until 21h. then few clouds. Shower 6½h. and showery 14h. until 20h. Strong wind throughout.
		Sum 9.5	Sum 66.8	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 29.23 ins. at the beginning of the week to 29.20 ins. by 1½h. on February 5; increased to 29.37 ins. by 8½h. on February 5; decreased to 28.81 ins. by 2h. on February 6; increased to 29.83 ins. by 7½h. on February 7; decreased to 29.45 ins. by 9h. on February 8; increased to 29.72 ins. by 0½h. on February 9; decreased to 29.04 ins. by 16½h. on February 11; increased and was 29.11 ins. by midnight on the same day.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables 1, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office, and Astronomer Royal.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

SPECIAL NOTES

The following changes became effective as from Return No. 1, 1950:—

1. The numbers of deaths now *include* non-civilians.

2. The deaths shewn are classified according to the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. (*see* also footnote to Table III).

3. In Table IV, the diseases formally shewn under Columns, D, E, F and G, have been modified in accordance with the provisions of the Public Health (Acute poliomyelitis, acute encephalitis, and meningococcal infection) Regulations, 1949.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available:—

Monthly Deaths from smallpox—about the fourth week following the month.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

ABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) **London.**

(b) **Great Towns in the aggregate.**

(*See Notes on page* 2)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term " Influenza " is mentioned on the certificate, e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 18th February, 1950, with totals from the first week of the year to date. } **London.**

(*See Notes on page 2*)

Abbreviated List No.*	Causes of Death	Deaths registered from 1st week of the year. 1950	Deaths registered during current week: All Ages.	Under 4 weeks	4 weeks—1 year.	1–5 years.	5–15 years.	15–25 years.	25–35 years.	35–45 years.	45–55 years.	55–65 years.	65–75 years.	75 years and over.

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 18th February, 1950. — **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page 2*)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

TABLE VII.—*continued.*

DATE. February		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	12	2.3	9.8	Few clouds until 8½h., cloudy until 11½h., then overcast. Frequent squally rain 13¾h. until 23½h. Moderate gale until 3h., then fresh wind until 7h. Fresh wind from 11h. Moderate gale 19h. until 22½h.
Monday	13	0.9	9.8	Overcast until 3h., few clouds until 9h., then overcast. Clearing 20½h., cloudless by 21h. Rain at 1h., 11h. until 12¼h. and 14½h. until 18h. Fresh wind until 2h.
Tuesday	14	4.2	9.9	Cloudless until 9½h., few clouds until 11½h., soon becoming overcast. Hoar frost and mist in morning. Rain from 20¼h.
Wednesday ..	15	0.2	10.0	Overcast. Rain until 2½h. Fresh wind 2h. until 8h., then strong.
Thursday	16	0.0	10.0	Overcast or nearly so until 15¼, partially cloudy until 17h., cloudless by 18h. Strong wind until 16h.
Friday	17	7.7	10.1	Cloudless or little cloud. Dew in morning.
Saturday	18	3.6	10.1	Nearly cloudless until 2h., then very cloudy generally. Dew in morning.
		Sum 18.9	Sum 69.7	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer increased from 29.11 ins. at the beginning of the week to 29.40 ins. by 10½h. on February 12; decreased to 28.87 ins. by 6h. on February 13; increased to 29.73 ins. by 19¾h. on February 14; decreased to 29.63 ins. by 3½h. on February 15, increased to 30.12 ins. by 19¾h. on February 16; decreased generally and was 29.99 ins. by midnight on February 18.

F.950 K.13. 2/50. Wt. 5—69. R.J. & Co. S. G.437 (Emergency). 70—9999 PRINTED IN GREAT BRITAIN.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables 1, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office, and Astronomer Royal.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

SPECIAL NOTE

A new table, derived from information obtained for the Registrar General by the Social Survey of the Central Office of Information by interviewing a representative sample of the population of England and Wales, is introduced below.

The table gives monthly sickness rates, sickness prevalence rates and incapacity rates by quarters, together with the rates for the last three available months. This table will, in future, be published on this page in the "Non-Weekly Statistics" section, about the last week of each month. The usual detailed analyses will continue to be published in the Registrar General's Quarterly Returns.

Sickness and Incapacity

Monthly Rates per 100 persons interviewed.

(1) Based on number of persons reporting some illness or injury.
(2) Based on total number of illnesses and injuries reported.
(3) Based on number of days incapacity reported.

BLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) **London.**

(b) **Great Towns in the aggregate.**

(*See Notes on page* 2)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

Week ended:—	Dec. 17	Dec. 24	Dec. 31	Jan. 7	Jan. 14	Jan. 21	Jan. 28	Feb. 4	Feb. 11	Feb. 18	Feb. 25	Totals from 1st Week of year, in Great Towns *ONLY* 1950.	1949.	1948.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term " Influenza " is mentioned on the certificate, e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 25th February, 1950, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 25th February, 1950. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page 2*)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. B	Meningococcal infection. Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

TABLE VII.—*continued.*

DATE. February		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	19	0.0	10.2	Cloudless until 2½h., overcast generally from 2¾h. Drizzle 3¼h. and rain from 21¼h.
Monday	20	0.6	10.3	Overcast generally. Rain until 3¾h., 4¾h. until 8½h. and at times 12h. until 17¾. Fresh wind 8h. until 18h.
Tuesday	21	4 0	10.4	Overcast until 7h., partially cloudy until 13½h., overcast until 16h., cloudless by 17h. Rain 3¾h. until 4½h. Hoar frost at night.
Wednesday ..	22	3.1	10.4	Cloudless until 9h., cloudy, mainly thin cloud by 9½h. Hoar frost in morning.
Thursday	23	0 2	10.5	Partially cloudy until 4½h., then overcast generally. Rain or slight rain 16¾h. until 21½h. Hoar frost in morning.
Friday	24	0.2	10.5	Overcast or nearly so. Occasional rain 6h. until 10½h. and 20½h. until 23½h.
Saturday	25	1.1	10.6	Overcast until 3h., cloudy until 13h., then overcast generally.
		Sum 9.2	Sum 72.9	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 29.99 ins. at the beginning of the week to 29.18 ins. by 8½h. on February 20; increased to 30.13 ins. by 9½h. on February 22; decreased to 29.11 ins. by 6½h. on February 25; increased and was 29.37 ins. by midnight on the same day.

1950

Sixpence net

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables 1, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office, and Astronomer Royal.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

SPECIAL NOTE

The Registrar General's latest estimates of local area populations will be found in "Estimates of the Populations of England and Wales: Populations of each Adminstrative Area at 30th June, 1949", H.M.S.O. price 4d net (or post free from P.O. Box 569, London, S.E.1, price 5d.). *See* also note on page 17.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available:—

Monthly (a) Deaths from smallpox—about the fourth week following the month.

(b) Survey of Sickness data: Monthly Sickness rates, sickness Prevalence rates and Incapacity rates by Quarters, with rates for the last three available months—about the last week of each month. (The usual detailed analyses will continue to be published in the Registrar General's Quarterly Returns).

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

Smallpox

There were no deaths from Smallpox during the month of January.

TABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) **London.**

(b) **Great Towns in the aggregate.**

(*See Notes on page 2*)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate, e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 4th March, 1950, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 4th March, 1950. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page* 2)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

TABLE VII.—*continued.*

DATE. February		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	26	1.4	10.7	Few clouds until 7½h., then very cloudy. Hoar frost in morning. Slight snow 9¼h. and hail 14½h. until 14¾h. Fresh wind 15h. until 23h.
Monday	27	3.4	10.8	Variably cloudy until 5h. few clouds until 16h. then cloudless. Hoar frost in morning. Fog 7h. until 10h. then mist or haze. Hoar frost again at night.
Tuesday	28	8.0	10.8	Cloudless or nearly so. Mist or fog from 18h. Hoar frost in morning and at night.
March				
Wednesday ..	1	8.4	10.9	Cloudless or nearly so. Hoar frost and fog in morning.
Thursday	2	2.4	10.9	Cloudless until 0¼h., thin cloud until 2½h., then very cloudy. Overcast from 11h. Hoar frost in morning. Lunar halo 1½h.
Friday	3	0.0	11.0	Overcast generally. Occasional damping 13½h. until 15¼h.
Saturday	4	1.6	11.1	Overcast until 6½h., cloudy, thin cloud until 21h., then overcast.
		Sum 25.2	Sum 76.2	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that or horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer increased from 29.37 ins. at the beginning of the week to 29.99 ins. by 21¼h. on February 27; decreased to 29.85 ins. by 15h. on February 28; increased to 30.13 ins. by 8¾h. on March 2; decreased to 30.02 ins. by 3¾h. on March 3; increased and was 30.30 ins. by midnight on March 4.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office, and Astronomer Royal.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

SPECIAL NOTE

The Registrar General's latest estimates of local area populations will be found in "Estimates of the Populations of England and Wales: Civilian Populations of each Administrative Area at 30th June, 1949", H.M.S.O. price 4d. net (or post free from P.O. Box 569, London, S.E.1. price 5d.). *See* also note on page 17.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available:—

Monthly (a) Deaths from smallpox—about the fourth week following the month.

(b) Survey of Sickness data: Monthly Sickness rates, sickness Prevalence rates and Incapacity rates, by Quarters, with rates for the last three available months—about the last week of each month. (The usual detailed analyses will continue to be published in the Registrar General's Quarterly Returns).

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

ABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) **London.**

(b) **Great Towns in the aggregate.**

(*See Notes on page 2*)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term " Influenza " is mentioned on the certificate, e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 11th March, 1950, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 11th March, 1950. — **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page* 2)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

DATE. March		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	5	1.1	11.1	Overcast until 5h., thin cloud until 22h., then overcast. Dew in morning. Mist from 10h. High fog 10h. until 16h.
Monday	6	4.0	11.2	Overcast until 11h., cloudy until 13h. then cloudless or nearly so. Mist until 8h.
Tuesday	7	5 8	11.3	Cloudless generally. Fog 2h. until 12h., thick fog between 3h. and 10h. Haze in afternoon then mist.
Wednesday ..	8	8 5	11.3	Cloudless until 21h., nearly overcast by 21½h. Mist and hoar frost in morning. Haze during day.
Thursday	9	2 6	11.4	Nearly overcast generally until 11h., cloudy until 17h., overcast until 21h., few clouds by 21½h.
Friday	10	0.0	11.5	Cloudless or few clouds until 2½h., overcast by 3h.
Saturday	11	2.5	11.5	Overcast generally. Partially cloudy period 14h. until 18½h.
		Sum 24.5	Sum 79.3	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer increased from 30.30 ins. at the beginning of the week to 30.44 ins. by 11½h. on March 6; decreased to 29.87 ins. by 18h. on March 9; increased to 30.09 ins. by 18½h. on March 10; decreased to 29.71 ins. by midnight on March 11.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office, and Astronomer Royal.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

SPECIAL NOTE

The Registrar General's latest estimates of local area populations will be found in "Estimates of the Populations of England and Wales: Civilian Populations of each Administrative Area at 30th June, 1949", H.M.S.O. price 4d. net (or post free from P.O. Box 569, London, S.E.1. price 5d.). *See* also note on page 17.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available:—

Monthly (a) Deaths from smallpox—about the fourth week following the month.

(b) Survey of Sickness data: Monthly Sickness rates, sickness Prevalence rates and Incapacity rates, by Quarters, with rates for the last three available months—about the last week of each month. (The usual detailed analyses will continue to be published in the Registrar General's Quarterly Returns).

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

TABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years. (a) **London.** (b) **Great Towns in the aggregate.**

(*See Notes on page* 2)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case o Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term " Influenza " is mentioned on the certificate, e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 18th March, 1950, with totals from the first week of the year to date. } **London.**

BE49	Suicide	92	4	–	–	–	–	–	–	2	1	1	–	–

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 18th March, 1950. **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page* 2)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. B	Meningococcal infection. D	Acute poliomyelitis: Paralytic E	Acute poliomyelitis: Non-paralytic F	Acute encephalitis: Infective G	Acute encephalitis: Post Infectious K	Typhus fever. H	Relapsing fever. I	Continued fever. (London only). J	Dysentery. L	Ophthalmia neonatorum. M	Puerperal pyrexia and Puerperal fever. N C	Smallpox. O	Paratyphoid fever. P	Typhoid fever. R	Food poisoning. S

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

TABLE VII.—*continued.*

DATE. March		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	12	5.7	11.6	Overcast generally until 7½h., then few clouds. Veiled from 22h. Slight rain 4h. 5 m. to 4h. 15m. and 5h. 35m. to 5h. 40m. Mist at night.
Monday	13	2.1	11.7	Nearly cloudless until 10h. then partially cloudy. Overcast generally from 13½h. Very cloudy period 3h.—6h. Mist or fog until 9h.
Tuesday	14	0.2	11.7	Overcast generally. Slight rain 18½h. until 20h., rain until 22½h., then slight rain until 23¼h. Mist in morning.
Wednesday ..	15	2.3	11.8	Very cloudy with occasional few clouds periods. Nearly cloudless 17h. until 23h. then clouding. Solar halo 11h. until 16h.
Thursday	16	2.9	11.8	Very cloudy generally. Rain or slight rain 4h. until 6h. and from 21¾. Shower 13¼h. Fresh or strong wind from 9h.
Friday	17	0.9	11.9	Overcast or nearly so until 18½h., little cloud by 19h. Cloudy from 23½h. Rain until 3½h. Thunder shower 13h. 50m. until 13h. 55m. Fresh or strong wind.
Saturday	18	4.2	12.0	Cloudy or partially cloudy until 13h., then overcast generally. Shower 15½h. Rain or slight rain 17h. 50m. until 23½h. Strong wind until 15h.
		Sum 18.3	Sum 82.5	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 29.71 ins. at the beginning of the week to 29.69 ins. by 2½h. on March 12; increased to 29.83 ins. by 21½h. on March 13; decreased to 29.41 ins. by 3½h. on March 16; increased to 29.54 ins. by 17¼h. on March 16; decreased to 29.43 ins. by 3¾h. on March 17; increased to 29.65 ins. by 21½h. on March 17; decreased and was 29.30 ins. by midnight on March 18

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director Meteorological Office, and Astronomer Royal.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931. "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available:—

Monthly (a) Deaths from smallpox—about the fourth week following the month.

(b) Survey of Sickness data: Monthly Sickness rates, sickness Prevalence rates and Incapacity rates, by Quarters, with rates for the last three available months—about the last week of each month. (The usual detailed analyses will continue to be published in the Registrar General's Quarterly Returns).

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

Sickness and Incapacity

Monthly Rates per 100 persons interviewed.

Based on the results of sample interviews carried out for the Registrar General by the Social Survey of the Central Office of Information.

(1) Based on number of persons reporting some illness or injury.
(2) Based on total number of illnesses and injuries reported.
(3) Based on number of days incapacity reported.

ABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) **London.**

(b) **Great Towns in the aggregate.**

(*See Notes on page* 2)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate, e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 25th March, 1950, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 25th March, 1950. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page* 2)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

TABLE VII.—*continued.*

DATE. March		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	19	5.7	12.1	Nearly overcast generally until 12h., partially cloudy until 17h. then little cloud. Sky veiled from 23h. Rain 3½h. until 4¼h. and slight showers 12h. until 15h. Fresh wind 5h. until 17h.
Monday	20	0.9	12.1	Sky veiled until 3h., overcast until 12h. then nearly overcast. Rain 3¾h. until 8h. then damping until 12h.
Tuesday	21	0.9	12.2	Very cloudy until 15h., overcast until 20h. then sky veiled. Rain 0½h., 1¼h. until 2¾h. and rain or heavy rain 13h. until 13½h. Mist or fog at night.
Wednesday ..	22	5.2	12.2	Cloudless 0h. until 12h., overcast by 13h. Mist or fog until 9h. Occasional damping or drizzle from 18h.
Thursday	23	0.0	12.3	Overcast. Occasional rain or drizzle until 22h.
Friday	24	5.5	12.4	Generally cloudy until 15½h., few clouds by 17h. Cloudless from 18h.
Saturday	25	10.0	12.5	Little cloud until 16½h. very cloudy by 17¼h. Mist and dew in morning.
		Sum 28.2	**Sum 85.8**	
No. of Column		**25**	**26**	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 29.30 ins. at the beginning of the week to 29.27 ins. by 3½h. on March 19; increased to 29.75 ins. by 23h. on March 19; decreased to 29.55 ins. by 15½h. on March 20; increased to 30.22 ins. by 0½h. on March 25; decreased to 30.06 ins. by midnight on the same day.

LONDON: HIS MAJESTY'S STATIONERY OFFICE
1950

Sixpence net

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office, and Astronomer Royal.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns" =London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available:—

Monthly (a) Deaths from smallpox—about the fourth week following the month.

(b) Survey of Sickness data: Monthly Sickness rates, sickness Prevalence rates and Incapacity rates, by Quarters, with rates for the last three available months—about the last week of each month. (The usual detailed analyses will continue to be published in the Registrar General's Quarterly Returns).

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

Smallpox

There were no deaths from Smallpox during the month of February.

ABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) **London.**
(b) **Great Towns in the aggregate.**

(*See Notes on page 2*)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term " Influenza " is mentioned on the certificate, e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 1st April, 1950, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 1st April, 1950.

England and Wales, Administrative Areas and Port Health Districts.

(*See Notes on page 2*)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

Saturday	1	1.0	12.9	Overcast generally. Cloudy period 4h. until 8h. Fresh wind 14h. until 21h. then strong.
		Sum 14.6	Sum 88.9	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 30.06 ins. at the beginning of the week to 29.98 ins. by 17h. on March 26; increased to 30.17 ins. by 23½h. on March 27; decreased to 29.89 ins. by 16½h. on March 29: increased to 30.01 ins. by 20½h. on March 30; decreased and was 29.32 ins. by midnight on April 1.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables 1, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office, and Astronomer Royal.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available:—

Monthly (a) Deaths from smallpox—about the fourth week following the month.

(b) Survey of Sickness data: Monthly Sickness rates, sickness Prevalence rates and Incapacity rates, by Quarters, with rates for the last three available months—about the last week of each month. (The usual detailed analyses will continue to be published in the Registrar General's Quarterly Returns).

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

ABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) **London.**

(b) **Great Towns in the aggregate.**

(*See Notes on page* 2)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate, e.g., influenzal pneumonia.

¶ Including 3 deaths from Smallpox.

** Return not received.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 8th April, 1950, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 8th April, 1950. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page 2*)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. B	Meningococcal infection. D	Acute poliomyelitis E	Paralytic F	Non-paralytic G	Acute encephalitis Infective GK	Post Infectious K	Typhus fever. H	Relapsing fever. I	Continued fever. (London only). J	Dysentery. L	Ophthalmia neonatorum. M	Puerperal pyrexia and Puerperal fever. N C	Smallpox. O	Paratyphoid fever. P	Typhoid fever. R	Food poisoning. S

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

TABLE VII.—*continued.*

DATE. April		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	2	5.7	13 0	Overcast until 5h., cloudless until 8½h. then very cloudy. Overcast from 18h. Rain 4h. until 4¾h. Showery 12½h. until 16h. Hail, thunder and lightning about 14¼h. Strong wind until 15h., fresh wind until 17h. and from 20½h.
Monday	3	1.5	13.0	Overcast until 5h. then generally cloudy. slight rain 2¼h. until 4h. Shower 10¼h. Fresh wind until 4h.
Tuesday	4	0.5	13 1	Few clouds until 5h., very cloudy until 19¼h. then few clouds. Shower 18h. Hoar frost in morning.
Wednesday ..	5	2.2	13 2	Little cloud until 5h., thin cloud until 10½h. then overcast generally.
Thursday	6	8 4	13.2	Generally cloudy until 3h. then little cloud. Partially cloudy period 13½h. until 18½h. Hoar frost in morning.
Friday	7	9.5	13.3	Cloudless until 7h. few clouds until 9½h. then sky veiled. Cloudless from 21h.
Saturday	8	3.3	13.4	Cloudless until 5½h., generally cloudy until 20h. then overcast. Rain 22h. until 23¼h. Fresh wind 7h. until 9h. then strong. Moderate gale between 12h. and 15h.
		Sum 31.1	Sum 92.2	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 29.32 ins. at the beginning of the week to 28.98 ins. by 14h. on April 2; increased to 29.60 ins. by 0½h. on April 4; decreased to 29.49 ins. by 15½h. on April 4; increased to 29.91 ins. by 23¾h. on April 6; decreased and was 29.39 ins. by midnight on April 8.

LONDON: HIS MAJESTY'S STATIONERY OFFICE
1950

Sixpence net

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables 1, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office, and Astronomer Royal.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available:—

Monthly (a) Deaths from smallpox—about the fourth week following the month.

(b) Survey of Sickness data: Monthly Sickness rates, sickness Prevalence rates and Incapacity rates, by Quarters, with rates for the last three available months—about the last week of each month. (The usual detailed analyses will continue to be published in the Registrar General's Quarterly Returns).

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

BIRTHS AND DEATHS registered in the Quarter ended 31st March, 1950, with comparative figures for the first Quarters of three earlier years. (The customary analysis will appear in the QUARTERLY RETURN in due course).

First Quarter of:—	LIVE BIRTHS.		STILLBIRTHS.		DEATHS (including non-civilians).		DEATHS OF INFANTS UNDER 1 YEAR.	
	Number.	per 1,000 total population.	Number.	per 1,000 total live & stillbirths	Number.	per 1,000 total population.	Number.	per 1,000 related live births.

1948	202,047	18·7	5,045	24·4	132,626	12·3	8,387	41
1938	155,187	15·3	6,185	38·3	137,897	13·6	10,585	69

ABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) **London.**
(b) **Great Towns in the aggregate.**

(*See Notes on page* 2)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate, e.g., influenzal pneumonia.

¶ Including 3 deaths from Smallpox.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 15th April, 1950, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 15th April, 1950. | **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page 2*)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. B	Meningococcal infection. D	Acute poliomyelitis Paralytic E	Acute poliomyelitis Non-paralytic F	Acute encephalitis Infective G	Acute encephalitis Post Infectious K	Typhus fever. H	Relapsing fever. I	Continued fever. (London only). J	Dysentery. L	Ophthalmia neonatorum. M	Puerperal pyrexia and Puerperal fever. N C	Smallpox. O	Paratyphoid fever. P	Typhoid fever. R	Food poisoning. S

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

TABLE VII.—*continued.*

DATE. April		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	9	5.5	13.4	Generally cloudy until 21½h. then clearing away. Rain 1½h. Showers 14h., 15¼h. and hail 16½h. Strong wind until 18h., moderate gale between 8h. and 15h.
Monday	10	0.1	13.5	Few clouds until 5¼h. then clouding up. Clearing 17½h., cloudless by 18h. Slight rain 9h. until 12h. Heavy shower about 15h.
Tuesday	11	4.2	13.5	Cloudless until 8h., generally cloudy until 18½h., little cloud by 19h. Shower 18½h. Fresh wind 8h. until 16h.
Wednesday ..	12	6.4	13.6	Little cloud until 8½h., cloudy until 18h., cloudless by 19h. Showers 13½h., 16h., and at 17h.
Thursday	13	1.6	13.7	Cloudless until 2½h., overcast by 3h. Cloudy 10½h. until 18h. then few clouds. Hoar frost in morning. Mist from 18h.
Friday	14	0.0	13.7	Little cloud until 3h., overcast by 4h. Hoar frost and mist in morning. Very gloomy 17h. then rain, heavy at first, with thunder and lightning until 18h.
Saturday	15	1.1	13.8	Nearly overcast generally until 22½h., nearly cloudless by 23h. Rain 18¼h. until 19½h.
		Sum 18.9	Sum 95.2	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 29.39 ins. at the beginning of the week to 29.36 ins. by 1h. on April 9; increased to 29.66 ins. by 0¾h. on April 10; decreased to 29.20 ins. by 15¾h. on April 10; increased to 29.40 ins. by 19½h. on April 11; decreased to 29.30 ins. by 15½h. on April 12; increased and was 29.86 ins. by midnight on April 15.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office, and Astronomer Royal.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available:—

Monthly (a) Deaths from smallpox—about the fourth week following the month.

(b) Survey of Sickness data: Monthly Sickness rates, sickness Prevalence rates and Incapacity rates, by Quarters, with rates for the last three available months—about the last week of each month. (The usual detailed analyses will continue to be published in the Registrar General's Quarterly Returns).

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

Civilian Death Rates from Tuberculosis and Cancer and Maternal Mortality—1949

Provisional death rates per million population for England and Wales during the year 1949 are as follows:—

	Males	*Females*	*Persons*
Respiratory Tuberculosis	516	301	403
Other Tuberculosis	62	47	54
Cancer	1,981	1,771	1,871

The maternal mortality (provisional) per 1,000 total live and still births based on deaths primarily classed to diseases of pregnancy, childbirth and the puerperal state as arranged in the Manual of the International List (5th revision) is as follows:—

No. 140—Post-abortive infection	0·11
No. 141—Abortion without mention of septic conditions ...	0·05
No. 147—Infection during childbirth and the puerperium ...	0·11
Nos. 142-146, Nos. 148-150 } Other maternal causes	0·71

BLE 1.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) **London.**

(b) **Great Towns in the aggregate.**

(*See Notes on page* 2)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate, e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 22nd April, 1950, with totals from the first week of the year to date. } **London.**

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

TABLE VII.—*continued.*

DATE. April		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	16	2.1	13.9	Cloudless until 6½h., generally cloudy until 19h., cloudless by 20h. Hoar frost in morning.
Monday	17	2.1	14.0	Little cloud until 9h., overcast by 11h. Damping 14h. until 20h., rain or slight rain until 22½h.
Tuesday	18	0.0	14.0	Overcast. Rain or slight rain 0h. until 17h. Mist in morning.
Wednesday ..	19	0.2	14.1	Overcast generally.
Thursday	20	9.7	14.1	Very cloudy until 1½h., then little cloud. Cloudy period 8h. until 10h.
Friday	21	2.6	14.2	Cloudless until 5h. then generally cloudy. Mist and dew in morning.
Saturday	22	7.7	14.3	Partially cloudy generally until 21h. then nearly overcast.
		Sum 24.4	Sum 98.6	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer increased from 29.86 ins. at the beginning of the week to 29.88 ins. by 9h. on April 16; decreased to 29.18 ins. by 9h. on April 18; increased to 30.03 by 9h. on April 22; decreased and was 29.92 ins. by midnight on the same day.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office, and Astronomer Royal.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available:—

Monthly (a) Deaths from smallpox—about the fourth week following the month.

(b) Survey of Sickness data: Monthly Sickness rates, sickness Prevalence rates and Incapacity rates, by Quarters, with rates for the last three available months—about the last week of each month. (The usual detailed analyses will continue to be published in the Registrar General's Quarterly Returns).

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

Sickness and Incapacity

Monthly Rates per 100 persons interviewed.

Based on the results of sample interviews carried out for the Registrar General by the Social Survey of the Central Office of Information.

(1) Based on number of persons reporting some illness or injury.
(2) Based on total number of illnesses and injuries reported.
(3) Based on number of days incapacity reported.

ABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) **London.**

(b) **Great Towns in the aggregate.**

(*See Notes on page* 2)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term " Influenza " is mentioned on the certificate, e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 29th April, 1950, with totals from the first week of the year to date. } **London.**

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

TABLE VII.—*continued.*

DATE. April		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	23	4.0	14.3	Overcast except for partially cloudy period 13h. until 18h. Occasional rain 2h. until 10½h., and slight rain from 23h.
Monday	24	2.2	14.4	Very cloudy generally. Frequent rain until 4h., squally showers of hail, sleet or snow 10¼h. until 16¾h. Very gloomy about 15h.
Tuesday	25	4.7	14.4	Cloudy until 8h., partially cloudy until 12½h. then overcast generally. Snow 6h. until 8h., and slight rain from 23h.
Wednesday ..	26	3.0	14.5	Overcast generally. Snow or sleet 0h. until 5¼h. Rain 10½h. until 11½h. and occasional rain from 15¼h. Thunder 15½h. and 17½h.
Thursday	27	6.8	14.6	Overcast until 2½h., partially cloudy until 15h. then nearly overcast. Occasional rain until 2¼h. Rain 17½h.
Friday	28	4.5	14.6	Overcast, cloudy or partially cloudy period 9h. until 16½h. Fresh wind 12h. until 18h.
Saturday	29	0.2	14.7	Overcast until 18h. then generally cloudy. Frequent rain or slight rain 5½h. until 15h.
		Sum 25.4	Sum 101.5	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 29.92 ins. at the beginning of the week to 29.32 ins. by 8h. on April 24; increased to 29.47 ins. by 23h. on April 24; decreased to 29.15 ins. by 2½h. on April 26th, increased generally and was 29.97 ins. by midnight on April 29.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director. Meteorological Office, and Astronomer Royal.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns" =London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available:—

Monthly (a) Deaths from smallpox—about the fourth week following the month.

(b) Survey of Sickness data: Monthly Sickness rates, sickness Prevalence rates and Incapacity rates, by Quarters, with rates for the last three available months—about the last week of each month. (The usual detailed analyses will continue to be published in the Registrar General's Quarterly Returns).

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants **under one year of age—about the third week in January.**
Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

Smallpox

There were no deaths from Smallpox during the month of March.

Estimates of Births

(a) Final estimate of live births to be expected in the **quarter ending 30th June, 1950** **184,000**

(b) Provisional estimate of live births to be expected in the **quarter ending 30th September, 1950** **176,000**

In the above estimates regard has been had to (1) sample returns of the number of special ration books issued to expectant mothers by the Ministry of Food, and (2) the recent trend of registered live births. The sample comprises some 200 Food Office areas containing about 25 per cent. of the population.

TABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) **London.**

(b) **Great Towns in the aggregate.**

(*See Notes on page* 2)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term " Influenza " is mentioned on the certificate, e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 6th May, 1950, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 6th May, 1950. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page 2*)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. B	Meningococcal infection. D	Acute poliomyelitis: Paralytic E	Acute poliomyelitis: Non-paralytic F	Acute encephalitis: Infective G	Acute encephalitis: Post Infectious K	Typhus fever. H	Relapsing fever. I	Continued fever. (London only). J	Dysentery. L	Ophthalmia neonatorum. M	Puerperal pyrexia and Puerperal fever. N C	Smallpox. O	Paratyphoid fever. P	Typhoid fever. R	Food poisoning. S

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

TABLE VII.—*continued.*

DATE. April		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	30	9.1	14.7	Cloudy until 10h., partially cloudy until 13h., few clouds until 18h., then cloudless.
May				
Monday	1	10.7	14.8	Cloudless until 6h., thin cloud until 12h., partially cloudy until 18h. then little cloud. Dew in morning. Solar halo 8½h. until 12h.
Tuesday	2	4.6	14.9	Cloudless until 3h., then generally cloudy. Thunder about 10h. Showers 10½h., 12½h. and 14¾h.
Wednesday ..	3	1.5	14.9	Very cloudy until 9h., then overcast generally. Rain 16½h. until 17½h. Slight rain at times 18h. until 19½h.
Thursday	4	0.1	15.0	Overcast generally until 20h., cloudless by 20½h. Very gloomy at 8h. then rain until 8½h.
Friday	5	0.2	15.0	Cloudless until 3h., overcast by 3½h. Rain 15h. until 15¾h.
Saturday	6	0.1	15.1	Overcast generally. Rain 3¾h. until 11h., damping until 12¼h. Mist in morning.
		Sum 26.3	Sum 104.4	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer increased from 29.97 ins. at the beginning of the week to 29.98 ins. by 7¼h. on April 30; decreased to 29.83 ins. by 16¼h. on May 2; increased to 30.05 ins. by 0¼h. on May 5; decreased to 29.83 ins. by 13¼h. on May 6; increased and was 29.91 ins. by midnight on the same day.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office, and Astronomer Royal.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available:—

Monthly (a) Deaths from smallpox—about the fourth week following the month.

(b) Survey of Sickness data: Monthly Sickness rates, sickness Prevalence rates and Incapacity rates, by Quarters, with rates for the last three available months—about the last week of each month. (The usual detailed analyses will continue to be published in the Registrar General's Quarterly Returns).

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

TABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years. (a) **London.** (b) **Great Towns in the aggregate.**

(*See Notes on page 2*)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term " Influenza " is mentioned on the certificate, e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 13th May, 1950, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 13th May, 1950. — **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page 2*)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

TABLE VI.—Air Temperature and Rainfall in the week ended 13th May, 1950.

TABLE VII.—*continued.*

DATE. May		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	7	1.0	15.1	Overcast until 8½h., cloudy until 15h. then overcast generally. Rain 15½h. until 16½h. Mist or fog 1h. until 17h.
Monday	8	0.0	15.2	Overcast throughout. Rain 3h. until 7h., occasional slight drizzle until 20h. then drizzle until 23h. Mist from 10h.
Tuesday	9	7.7	15.3	Overcast, clearing 9h. to little cloud by 9½h. Clouding up 21h. Mist in morning and at night.
Wednesday ..	10	8.1	15.3	Overcast until 10h., cloudless or nearly so from 10½h. Mist and dew in morning.
Thursday	11	13.3	15.4	Cloudless throughout. Dew in morning.
Friday	12	13.4	15.4	Cloudless, little cloud between 10½h. and 13h. Dew in morning.
Saturday	13	13.5	15.5	Cloudless, little cloud about 7h.
		Sum 57.0	**Sum** 107.2	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer increased from 29.91 ins. at the beginning of the week to 29.98 ins. by 21¼h. on May 7; decreased to 29.85 ins. by 19¼h. on May 8; increased to 30.07 ins. by 2h. on May 12; decreased to 29.92 ins. by 18¾h. on May 13; increased and was 29.95 ins. by midnight on the same day.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office, and Astronomer Royal.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available:—

Monthly (a) Deaths from smallpox—about the fourth week following the month.

(b) Survey of Sickness data: Monthly Sickness rates, sickness Prevalence rates and Incapacity rates, by Quarters, with rates for the last three available months—about the last week of each month. (The usual detailed analyses will continue to be published in the Registrar General's Quarterly Returns).

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

BLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years. (a) **London.** (b) **Great Towns in the aggregate.**

(*See Notes on page* 2)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term " Influenza " is mentioned on the certificate, e g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 20th May, 1950, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 20th May, 1950.

England and Wales, Administrative Areas and Port Health Districts.

(*See Notes on page* 2)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	A Cholera.	B Plague.	D Meningococcal infection. Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

DATE. May		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	14	8.0	15.5	Little cloud until 3½h., overcast until 8h., little cloud by 9½h. Cloudy 14h. until 18h. then overcast.
Monday	15	1.4	15.6	Overcast generally.
Tuesday	16	0.0	15.6	Overcast, few small breaks.
Wednesday ..	17	2.8	15.7	Nearly overcast until 16h., rapidly becoming cloudless.
Thursday	18	0.5	15.7	Cloudless until 1½h., generally cloudy until 12¾h. then overcast.
Friday	19	1.5	15.8	Overcast until 5h., cloudy until 17h. then overcast again. Rain from 22h.
Saturday	20	2.1	15.8	Overcast until 15½h., partially cloudy until 21h. then cloudless. Rain until 3h.
		Sum 16.3	Sum 109.7	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer increased from 29.95 ins. at the beginning of the week to 30.01 ins. by 9½h. on May 15, decreased to 29.46 ins. by 6h. on May 18; increased to 29.60 ins. by 13h. on May 19; decreased to 29.41 ins. by 3¾h. on May 20; increased and was 29.64 ins by midnight on the same day.

GENERAL REGISTER OFFICE

THE REGISTRAR GENERAL'S
WEEKLY RETURN FOR
ENGLAND AND WALES

BIRTHS AND DEATHS, INFECTIOUS DISEASES, WEATHER

WEEK ENDED

SATURDAY, 27th MAY, 1950

Crown Copyright Reserved.

LONDON: HIS MAJESTY'S STATIONERY OFFICE
1950

Sixpence net

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables 1, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office, and Astronomer Royal.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available:—

Monthly (a) Deaths from smallpox—about the fourth week following the month.

(b) Survey of Sickness data: Monthly Sickness rates, sickness Prevalence rates and Incapacity rates, by Quarters, with rates for the last three available months—about the last week of each month. (The usual detailed analyses will continue to be published in the Registrar General's Quarterly Returns).

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

Sickness Rates and Days of Incapacity

Monthly Rates per 100 persons interviewed.

Based on the results of sample interviews carried out for the Registrar General by the Social Survey of the Central Office of Information.

	Sickness Rate (Persons[1] per month)					Sickness prevalence rate (Illnesses[2] per month)			Incapacity rate (Days[3] per month)				
	Total	Age 16–64		Age 65 & over		Total	Minor & ill-defined	More serious	Total	Age 16–64		Age 65 &	
		Males	Females	Males	Females					Males	Females	Males	Fem
1947 4th Quarter	70	62	72	79	88	49	134	15	100	97	84	165	1

2nd ,,	64	55	66	73	83	135	122	13	82	85	63	128	1
3rd ,,	64	55	67	75	84	135	122	14	84	78	68	102	1
4th ,,	71	64	73	79	88	153	138	15	126	100	105	183	2
1949 1st ,,	73	65	76	82	89	163	145	18	136	119	127	200	2
2nd ,,	68	59	71	78	87	147	134	13	90	84	74	151	1
3rd ,,	65	56	68	74	85	133	120	12	78	81	71	89	
(4) 4th ,,	70	63	73	75	86	1 9	133	16	121	95	98	225	3
1949 October	69	60	73	76	86	144	130	14	109	88	96	183	2
November	71	64	73	77	87	151	134	17	129	101	104	237	1
(4) December	70	63	72	73	86	151	134	17	126	98	93	256	1

(1) Number of persons reporting some illness or injury. (2) Total number of illnesses and injuries reported. (3) Numbe of days incapacity reported. (4) No interviews were held in February. These rates are therefore based on one month' interviews but have been corrected to make them comparable with the rates shown in the rest of the table.

ABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) **London.**

(b) **Great Towns in the aggregate.**

(*See Notes on page* 2)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

Week ended:—	Mar. 18	Mar. 25	Apr. 1	Apr. 8	Apr. 15	Apr. 22	Apr. 29	May 6	May 13	May 20	May 27	Totals from 1st Week of year, in Great Towns *ONLY* 1950.	1949.	1948.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate, e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 27th May, 1950, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 27th May, 1950. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page* 2)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

TABLE VII.—*continued.*

DATE. May		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	21	3.2	15.9	Cloudless until 4h., overcast until 12h. then generally cloudy. Occasional rain 8¼h. until 11¾h. Thunder about 9h. Lightning 21h. 50m. Mist 4½h. until 12h.
Monday	22	10.2	15.9	Generally cloudy until 7½h.. few clouds until 20h. then cloudless.
Tuesday	23	10.8	16.0	Cloudless until 2h., thin cloud until 23h. then overcast. Dew in morning.
Wednesday ..	24	0.0	16.0	Overcast. Slight rain 9h. until 10h.
Thursday	25	0.0	16.0	Overcast. Rain 8h. until 13½h. then drizzle until 15h. Mist from 15h.
Friday	26	0.0	16.1	Overcast. Occasional drizzle in afternoon.
Saturday	27	3.0	16.1	Overcast until 6h., cloudy until 11h. then overcast. Occasional rain 18h. until 20h. Mist and dew in morning.
		Sum 27.2	Sum 112.0	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 29.64 ins. at the beginning of the week to 29.51 ins. by 17¼h. on May 21; increased to 29.95 ins. by 19h. on May 24; decreased generally to 29.59 ins. by 21¼h. on May 27; increased and was 29.60 ins. by midnight on the same day.

H.403. K.13. 5/50. Wt. 6—Ps. 54. R.J. & Co. S. G.437 (Emergency). 70—9999 PRINTED IN GREAT BRITAIN.

GENERAL REGISTER OFFICE

THE REGISTRAR GENERAL'S WEEKLY RETURN FOR ENGLAND AND WALES

BIRTHS AND DEATHS, INFECTIOUS DISEASES, WEATHER

WEEK ENDED

SATURDAY, 3rd JUNE, 1950

Crown Copyright Reserved

LONDON: HIS MAJESTY'S STATIONERY OFFICE
1950

Sixpence net

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns" =London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

SPECIAL NOTE

As from Sunday, 28th May, the meteorological observations shown in Table VII relate to readings taken at Kew Observatory, Richmond, and are supplied by the Director of the Meteorological Office. This change has been made necessary by the removal of the Royal Observatory from Greenwich to Herstmonceux.

The main features of the table have been preserved but the barometer mean daily readings (Col. 3) have been reduced to mean sea level and wind velocities have been substituted for wind pressures (Cols. 19, 20 and 21).

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available:—

Monthly (a) Deaths from smallpox—about the fourth week following the month.

(b) Survey of Sickness data: Monthly Sickness rates, sickness Prevalence rates and Incapacity rates, by Quarters, with rates for the last three available months—about the last week of each month. (The usual detailed analyses will continue to be published in the Registrar General's Quarterly Returns).

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

Smallpox

There were no deaths from Smallpox during the month of April.

ABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) **London.**

(b) **Great Towns in the aggregate.**

(*See Notes on page* 2)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate, e.g., influenzal pneumonia.

** Return not received.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 3rd June, 1950, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 3rd June, 1950. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page 2*)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. B	Meningococcal infection. D	Acute poliomyelitis: Paralytic E	Acute poliomyelitis: Non-paralytic F	Acute encephalitis: Infective G	Acute encephalitis: Post Infectious K	Typhus fever. H	Relapsing fever. I	Continued fever. (London only). J	Dysentery. L	Ophthalmia neonatorum. M	Puerperal pyrexia and Puerperal fever. N C	Smallpox. O	Paratyphoid fever. P	Typhoid fever. R	Food poisoning. S

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

TABLE VII.—*continued.*

DATE. May		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	28	13.0	16.10	Fine early, cloudy mid-day then clearing.
Monday	29	4.7	16.13	Cloudy until late evening, then clearing.
Tuesday	30	11.4	16.17	Generally cloudy.
Wednesday ..	31	10.3	16.20	Clear morning, cloudy later.
June				
Thursday	1	10.4	16.23	Generally cloudy, fresh Easterly wind 10h.—19h.
Friday	2	1.8	16.25	Generally cloudy, intermittent light drizzle a.m., thunderstorm 15h.—17h., mist late evening.
Saturday	3	10.5	16.28	Overcast and foggy early, clearing by 09h., cloudy, clear night.
		Sum 62.1	Sum 113.36	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h., 6h. and 9h. P.M. The readings of the barometer, dry bulb thermometer and the wet bulb thermometer are the means of 24 hourly values derived from photographic records, and the relative humidity is similarly a mean of 24 hourly values computed from the dry and wet bulb readings by means of Jelinek's Tables of Humidity. The dew point temperature is deduced from the daily means of dry and wet bulb thermometers.

The average temperature of the air is that derived from a discussion of the observations made at Kew during the 70 years ending 1940, and that of horizontal movement of the air from a discussion of the anemometric records for the 35 years ending 1915. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and − "*lower*" than the average.

The numbers in columns 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer increased from 29.77 ins. at the beginning of the week to 30.25 ins. by midnight on May 29; then decreased to 30.07 ins. on the afternoon of June 2; increasing again to 30.19 ins. by midnight on June 3.

GENERAL REGISTER OFFICE

THE REGISTRAR GENERAL'S WEEKLY RETURN FOR ENGLAND AND WALES

BIRTHS AND DEATHS, INFECTIOUS DISEASES, WEATHER

WEEK ENDED

SATURDAY, 10th JUNE, 1950

Crown Copyright Reserved.

LONDON: HIS MAJESTY'S STATIONERY OFFICE
1950

Sixpence net

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns" =London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

SPECIAL NOTE

As from Sunday, 28th May, the meteorological observations shown in Table VII relate to readings taken at Kew Observatory, Richmond, and are supplied by the Director of the Meteorological Office. This change has been made necessary by the removal of the Royal Observatory from Greenwich to Herstmonceux.

The main features of the table have been preserved but the barometer mean daily readings (Col. 3) have been reduced to mean sea level and wind velocities have been substituted for wind pressures (Cols. 19, 20 and 21).

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available:—

Monthly (a) Deaths from smallpox—about the fourth week following the month.

(b) Survey of Sickness data: Monthly Sickness rates, sickness Prevalence rates and Incapacity rates, by Quarters, with rates for the last three available months—about the last week of each month. (The usual detailed analyses will continue to be published in the Registrar General's Quarterly Returns).

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

BLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) **London.**

(b) **Great Towns in the aggregate.**

(*See Notes on page 2*)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term " Influenza " is mentioned on the certificate, e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 10th June, 1950, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 10th June, 1950. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page 2*)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

TABLE VII.—*continued.*

DATE. June 15 JU		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	4	13.5	16.32	Generally cloudy. Dew morning and at night.
Monday	5	10.0	16.33	Fine early, then cloudy. Distant thunder in afternoon. Dew in morning.
Tuesday	6	13.6	16.37	Cloudy at first then clearing. Fresh Easterly wind at noon. Dew in morning.
Wednesday ..	7	9.9	16.40	Fine morning, then cloudy. Distant thunder 15h. 36m.—16h. 29m. Dew in morning.
Thursday	8	6.3	16.40	Generally cloudy.
Friday	9	14.0	16.43	Cloudy day, clearing during evening.
Saturday	10	14.6	16.45	Cloudy early then clearing. Dew in morning.
		Sum 81.9	Sum 114 .70	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h., 6h. and 9h. P.M. The readings of the barometer, dry bulb thermometer and the wet bulb thermometer are the means of 24 hourly values derived from photographic records, and the relative humidity is similarly a mean of 24 hourly values computed from the dry and wet bulb readings by means of Jelinek's Tables of Humidity. The dew point temperature is deduced from the daily means of dry and wet bulb thermometers.

The average temperature of the air is that derived from a discussion of the observations made at Kew during the 70 years ending 1940, and that of horizontal movement of the air from a discussion of the anemometric records for the 35 years ending 1915. In reading columns 8 and 23 it will be borne in mind that + indicates *"higher"* and − *"lower"* than the average.

The numbers in columns 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer increased from 30.20 ins. at the beginning of the week to 30.26 ins. by 8h. on June 5th; then decreased steadily to 29.92 ins. at 20.00h. on June 8th; increasing again to 30.17 ins. at 23.00h. on June 10th.

H.580 K.13. 6/50. Wt. 6—Ps. 55. R.J. & Co. S. G.437 (Emergency). 70—9999 PRINTED IN GREAT BRITAIN.

GENERAL REGISTER OFFICE

THE REGISTRAR GENERAL'S WEEKLY RETURN FOR ENGLAND AND WALES

BIRTHS AND DEATHS, INFECTIOUS DISEASES, WEATHER

WEEK ENDED

SATURDAY, 17th JUNE, 1950

Crown Copyright Reserved.

LONDON: HIS MAJESTY'S STATIONERY OFFICE
1950

Sixpence net

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included.*

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

SPECIAL NOTE

As from Sunday, 28th May, the meteorological observations shown in Table VII relate to readings taken at Kew Observatory, Richmond, and are supplied by the Director of the Meteorological Office. This change has been made necessary by the removal of the Royal Observatory from Greenwich to Herstmonceux.

The main features of the table have been preserved but the barometer mean daily readings (Col. 3) have been reduced to mean sea level and wind velocities have been substituted for wind pressures (Cols. 19, 20 and 21).

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available:—

Monthly

(a) Deaths from smallpox—about the fourth week following the month.

(b) Survey of Sickness data: Monthly Sickness rates, sickness Prevalence rates and Incapacity rates, by Quarters, with rates for the last three available months—about the last week of each month. (The usual detailed analyses will continue to be published in the Registrar General's Quarterly Returns).

Quarterly

(a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual

Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Civilian death rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

TABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years. (a) **London.** (b) **Great Towns in the aggregate.**

(*See Notes on page* 2)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate, e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 17th June, 1950, with totals from the first week of the year to date. } **London.**

(*See Notes on page 2*)

Abbreviated List No.*	Causes of Death	Deaths registered from 1st week of the year. 1950	Deaths registered during current week: All Ages.	Under 4 weeks	4 weeks—1 year.	1–5 years.	5–15 years.	15–25 years	25–35 years.	35–45 years.	45–55 years.	55–65 years.	65–75 years.	75 years and over.

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 17th June, 1950. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page 2*)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

TABLE VII.—*continued.*

DATE. June		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	11	13.5	16.47	Generally fine. Fresh Easterly wind 18-20h. G.M.T. Dew in morning.
Monday	12	13.7	16.48	Fine morning, cloudy later. Fresh Easterly wind 09-16h. Distant thunderstorm 19.33-55h. G.M.T., with slight rain.
Tuesday	13	7.9	16.50	Fair to cloudy. Dew in morning.
Wednesday ..	14	0.0	16.52	Continuous light and moderate rain, heavy at 11.15h. G.M.T.
Thursday	15	13.1	16.53	Generally cloudy, very light showers in afternoon. Dew in evening.
Friday	16	11.0	16.55	Fine early and late, cloudy afternoon. Dew in morning.
Saturday	17	3.8	16.55	Generally cloudy, occasional very light rain in afternoon.
		Sum 63.0	Sum 115.60	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h., 6h. and 9h. P.M. The readings of the barometer, dry bulb thermometer and the wet bulb thermometer are the means of 24 hourly values derived from photographic records, and the relative humidity is similarly a mean of 24 hourly values computed from the dry and wet bulb readings by means of Jelinek's Tables of Humidity. The dew point temperature is deduced from the daily means of dry and wet bulb thermometers.

The average temperature of the air is that derived from a discussion of the observations made at Kew during the 70 years ending 1940, and that of horizontal movement of the air from a discussion of the anemometric records for the 35 years ending 1915. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and − "*lower*" than the average.

The numbers in columns 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer after increasing to 30.24 ins. at 21h. on the 11th, decreased to 29.73 ins. at 11.15h. on the 14th; then increased steadily to 29.93 ins.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

Acute Poliomyelitis. England and Wales.

Weekly notifications * of acute poliomyelitis in 1950 compared with those in 1949, 1948 and 1947.

1949 1st "	73	65	76	82	89	163	145	18	136	119	127	200	220
2nd "	68	59	71	78	87	147	134	13	90	84	74	151	165
3rd "	65	56	68	74	85	133	120	12	78	81	71	89	99
(4) 4th "	70	63	73	75	86	149	133	16	121	95	98	225	302
1949 (4) December	70	63	72	73	86	151	134	17	126	98	93	256	343
1950 (4) January	73	66	75	79	88	158	141	17	129	109	119	203	228
February	72	66	73	80	89	154	135	19	130	115	119	179	232

(1) Number of persons reporting some illness or injury. (2) Total number of illnesses and injuries reported. (3) Number of days incapacity reported. (4) No interviews were held in February. These rates are therefore based on one month's interviews but have been corrected to make them comparable with the rates shown in the rest of the table.

ABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years. (a) **London.** (b) **Great Towns in the aggregate.**

(*See Notes on page* 2)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term " Influenza " is mentioned on the certificate, e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 24th June, 1950, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 24th June, 1950. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page 2*)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. B	Meningococcal infection. D	Acute poliomyelitis: Paralytic E	Acute poliomyelitis: Non-paralytic F	Acute encephalitis: Infective G	Acute encephalitis: Post Infectious K	Typhus fever. H	Relapsing fever. I	Continued fever. (London only). J	Dysentery. L	Ophthalmia neonatorum. M	Puerperal pyrexia and Puerperal fever. N C	Smallpox. O	Paratyphoid fever. P	Typhoid fever. R	Food poisoning. S

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

TABLE VII.—*continued.*

DATE. June		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	18	3.5	16.57	Fair early, then cloudy, fresh SW'ly wind 11—18h. Dew in morning.
Monday	19	5.5	16.57	Cloudy.
Tuesday	20	9.7	16.57	Generally cloudy. Fresh SW'ly wind 14—18h. Light showers morning and afternoon, heavy at 12.30h. Dew in morning.
Wednesday ..	21	2.7	16.58	Cloudy. Rain in morning, showers, heavy at times, thunder and lightning to NW in evening. Fresh SW'ly wind 11—15h.
Thursday	22	10.0	16.58	Generally cloudy, showers in afternoon, fresh SW—SSW'ly wind 12—17h.
Friday	23	7.3	16.57	Generally cloudy, with continuous and heavy rain in morning. Fine in evening.
Saturday	24	4.9	16.57	Generally cloudy, showers and moderate rain in afternoon and evening.
		Sum 43.6	Sum 116.01	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h., 6h. and 9h. P.M. The readings of the barometer, dry bulb thermometer and the wet bulb thermometer are the means of 24 hourly values derived from photographic records, and the relative humidity is similarly a mean of 24 hourly values computed from the dry and wet bulb readings by means of Jelinek's Tables of Humidity. The dew point temperature is deduced from the daily means of dry and wet bulb thermometers.

The average temperature of the air is that derived from a discussion of the observations made at Kew during the 70 years ending 1940, and that of horizontal movement of the air from a discussion of the anemometric records for the 35 years ending 1915. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and − "*lower*" than the average.

The numbers in columns 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer increased from 29.93 ins. at the beginning of the week to 30.03 ins. by 08h. on the 19th; decreased to 29.45 ins. by 14.20h. on the 21st; increased to 30.07 ins. by 06.30h. on the 24th; then decreased to 30.04 ins. at 24h. on the 24th.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables 1, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

Acute Poliomyelitis. England and Wales.

Weekly notifications * of acute poliomyelitis in 1950 compared with those in 1949, 1948 and 1947.

Week Ended	May 6	May 13	May 20	May 27	June 3	June 10	June 17	June 24	July 1	July 8	July 15	July 22	July 29	Aug 5	Aug 12	Aug 19	Aug 26	Sept 2	Sept 9	Sept 16	Sept 23	Sept 30

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term " Influenza " is mentioned on the certificate, e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 1st July, 1950, with totals from the first week of the year to date. } **London.**

(*See Notes on page 2*)

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 1st July, 1950. | **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page 2*)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

DATE. June		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	25	6.0	16.57	Fair. Light rain early, then continuous light to moderate, with a shower in the morning. Two light showers in the afternoon. Dew in evening.
Monday	26	5.0	16.55	Cloudy. Dew in morning.
Tuesday	27	3.1	16.55	Cloudy.
Wednesday ..	28	9.0	16.53	Generally cloudy. light rain in morning.
Thursday	29	12.6	16.52	Cloudy early, then fine.
Friday	30	9.7	16.50	Generally cloudy until late evening, then fine.
July				
Saturday	1	9.5	16.50	Generally cloudy. Dew in morning.
		Sum 54.9	Sum 115.72	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h., 6h. and 9h. P.M. The readings of the barometer, dry bulb thermometer and the wet bulb thermometer are the means of 24 hourly values derived from photographic records, and the relative humidity is similarly a mean of 24 hourly values computed from the dry and wet bulb readings by means of Jelinek's Tables of Humidity. The dew point temperature is deduced from the daily means of dry and wet bulb thermometers.

The average temperature of the air is that derived from a discussion of the observations made at Kew during the 70 years ending 1940, and that of horizontal movement of the air from a discussion of the anemometric records for the 35 years ending 1915. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and − "*lower*" than the average.

The numbers in columns 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer increased from 30.01 ins. at 03.35h. 25th to 30.21 ins. at 07.10h. 26th, then decreased to 29.89 ins. at 17.15h. 29th, and increased to 30.17 ins. by 07.15h. 1st, decreasing to 30.10 ins. by 24h. 1st.

THE REGISTRAR GENERAL'S
WEEKLY RETURN FOR
ENGLAND AND WALES

BIRTHS AND DEATHS, INFECTIOUS DISEASES, WEATHER

WEEK ENDED

SATURDAY, 8th JULY, 1950

Crown Copyright Reserved.

LONDON: HIS MAJESTY'S STATIONERY OFFICE
1950

Sixpence net

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available:—

Monthly (a) Deaths from smallpox—about the fourth week following the month.

(b) Survey of Sickness data: Monthly Sickness rates, sickness Prevalence rates and Incapacity rates, by Quarters, with rates for the last three available months—about the last week of each month. (The usual detailed analyses will continue to be published in the Registrar General's Quarterly Returns).

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

Smallpox

There were no deaths from Smallpox during the month of May.

Acute Poliomyelitis. England and Wales.

Weekly notifications * of acute poliomyelitis in 1950 compared with those in 1949, 1948 and 1947.

Week Ended	May 6	May 13	May 20	May 27	June 3	June 10	June 17	June 24	July 1	July 8	July 15	July 22	July 29	Aug 5	Aug 12	Aug 19	Aug 26	Sept 2	Sept 9	Sept 16	Sept 23	Sep 30

* Not corrected for revision of diagnosis.

ABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) **London.**

(b) **Great Towns in the aggregate.**

(*See Notes on page 2*)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to e Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. eaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term " Influenza " is mentioned on the certificate, g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 8th July, 1950, with totals from the first week of the year to date. } **London.**

(See Notes on page 2)

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the number is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 8th July, 1950. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page 2*)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

DATE. July		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	2	13.8	16.48	Fine morning and evening. fair in afternoon. Dew in morning.
Monday	3	0.0	16.45	Cloudy. Light, moderate and heavy rain until late afternoon, fresh Easterly wind at 11h.
Tuesday	4	0.0	16.43	Cloudy all day.
Wednesday ..	5	0.0	16.42	Cloudy. Occasional light rain in the early morning.
Thursday	6	1.1	16.40	Cloudy. Moderate and heavy rain in morning, moderate to light in early afternoon. Light shower in early evening and distant thunder.
Friday	7	9.8	16.37	Cloudy in morning, fair in afternoon, fine later.
Saturday	8	10.0	16.35	Cloudy early, then fair, becoming fine late afternoon.
		Sum 34.7	Sum 114.90	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h., 6h. and 9h. P.M. The readings of the barometer, dry bulb thermometer and the wet bulb thermometer are the means of 24 hourly values derived from photographic records, and the relative humidity is similarly a mean of 24 hourly values computed from the dry and wet bulb readings by means of Jelinek's Tables of Humidity. The dew point temperature is deduced from the daily means of dry and wet bulb thermometers.

The average temperature of the air is that derived from a discussion of the observations made at Kew during the 70 years ending 1940, and that of horizontal movement of the air from a discussion of the anemometric records for the 35 years ending 1915. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and − "*lower*" than the average.

The numbers in columns 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 30.10 ins. at the beginning of the week to 29.81 ins. by 11.05h. on 3rd; increased to 29.99 ins. by 10.25h. on 4th; decreased to 29.82 ins. by 17.40h. on 6th; then increased to 30.14 ins. by 08.20h. on 8th; and decreased to 30.05 ins. by 24h.

GENERAL REGISTER OFFICE

THE REGISTRAR GENERAL'S WEEKLY RETURN FOR ENGLAND AND WALES

BIRTHS AND DEATHS, INFECTIOUS DISEASES, WEATHER

WEEK ENDED

SATURDAY, 15th JULY, 1950

Crown Copyright Reserved.

LONDON: HIS MAJESTY'S STATIONERY OFFICE
1950

Sixpence net

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director Meteorological Office.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

ENGLAND AND WALES

BIRTHS AND DEATHS registered in the Quarter ended 30th June, 1950, with comparative figures for the Second Quarters of three earlier years. (The customary analysis will appear in the QUARTERLY RETURN in due course).

Second Quarter of:—	LIVE BIRTHS.		STILLBIRTHS.		DEATHS (including non-civilians).		DEATHS OF INFANTS UNDER 1 YEAR.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term " Influenza " is mentioned on the certificate, e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 15th July, 1950, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 15th July, 1950. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page 2*)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. B	Meningococcal infection. D	Acute poliomyelitis: Paralytic E	Acute poliomyelitis: Non-paralytic F	Acute encephalitis: Infective G	Acute encephalitis: Post Infectious K	Typhus fever. H	Relapsing fever. I	Continued fever. (London only). J	Dysentery. L	Ophthalmia neonatorum. M	Puerperal pyrexia and Puerperal fever. N C	Smallpox. O	Paratyphoid fever. P	Typhoid fever. R	Food poisoning. S

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

TABLE VII.—*continued.*

DATE. July		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	9	13.2	16.32	Fine, becoming cloudy. Moderate rain in late evening, heavy at 21.40h. and 23.10h. Distant thunder and lightning. Dew in morning.
Monday	10	7.8	16.28	Fair, becoming cloudy. Light rain early, showers during day, heavy at 13h. and 13.25h. Moderate in evening.
Tuesday	11	8.4	16.27	Cloudy until early afternoon, then fair. Fresh W'ly wind 08h.—20h.
Wednesday ..	12	7.6	16.23	Cloudy all day, fair late evening. Dew in morning and in evening.
Thursday	13	9.4	16.20	Fair during morning, becoming cloudy. Continuous moderate rain late evening, heavy 21.35—45h. Dew in morning.
Friday	14	13.0	16.17	Fair. Moderate rain very early, fresh SW'ly wind at 14.35h.
Saturday	15	2.3	16.13	Fair until about 09h., then cloudy, with intermittent light rain, occasionally moderate. Fresh SE'ly wind, 10h.—12h., 16h., 22h.
		Sum 6.17	Sum 113.60	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h., 6h. and 9h. P.M. The readings of the barometer, dry bulb thermometer and the wet bulb thermometer are the means of 24 hourly values derived from photographic records, and the relative humidity is similarly a mean of 24 hourly values computed from the dry and wet bulb readings by means of Jelinek's Tables of Humidity. The dew point temperature is deduced from the daily means of dry and wet bulb thermometers.

The average temperature of the air is that derived from a discussion of the observations made at Kew during the 70 years ending 1940, and that of horizontal movement of the air from a discussion of the anemometric records for the 35 years ending 1915. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and − "*lower*" than the average.

The numbers in columns 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 30.05 ins. at the beginning of the week to 29.72 ins. by 07.45h. on the 11th; then increased to 29.95 ins. by 24h. on the 14th; and decreased to 29.65 ins. by 24h. on the 15th.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

Sickness Rates and Days of Incapacity. England and Wales.

Monthly Rates per 100 persons interviewed.

Based on the results of sample interviews carried out for the Registrar General by the Social Survey of the Central Office of Information.

	Sickness Rate (Persons[1] per month)					Sickness prevalence rate (Illnesses[2] per month)			Incapacity rate (Days[3] per month)				
	Total	Age 16–64		Age 65 & over		Total	Minor & ill-defined	More serious	Total	Age 16–64		Age 65 & o

1949 1st ,,	73	65	76	82	89	163	145	18	136	119	127	200	2
2nd ,,	68	59	71	78	87	147	134	13	90	84	74	151	1
3rd ,,	65	56	68	74	85	133	120	12	78	81	71	89	
(4) 4th ,,	70	63	73	75	86	149	133	16	121	95	98	225	3
1950 (4) 1stQuarter	72	65	74	80	89	154	135	19	128	111	114	196	2
1950 (4) January	73	66	75	79	88	158	141	17	129	109	119	203	2
February	72	66	73	80	89	154	135	19	130	115	119	179	2
March	70	62	73	80	89	149	130	19	123	110	105	206	2

(1) Number of persons reporting some illness or injury. (2) Total number of illnesses and injuries reported. (3) Number of days incapacity reported. (4) No interviews were held in February. These rates are therefore based on one month's interviews but have been corrected to make them comparable with the rates shown in the rest of the table.

Smallpox

There were no deaths from Smallpox registered in England and Wales during the month of June.

Acute Poliomyelitis. England and Wales.

Weekly notifications * of acute poliomyelitis in 1950 compared with those in 1949, 1948 and 1947.

Week Ended	May 6	May 13	May 20	May 27	June 3	June 10	June 17	June 24	July 1	July 8	July 15	July 22	July 29	Aug 5	Aug 12	Aug 19	Aug 26	Sept 2	Sept 9	Sept 16	Sept 23	Sep 30

* Not corrected for revision of diagnosis.

LE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) **London.**
(b) **Great Towns in the aggregate.**

(*See Notes on page* 2)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term " Influenza " is mentioned on the certificate, e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 22nd July, 1950, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 22nd July, 1950. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page 2*)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

TABLE VII.—*continued.*

DATE. July		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	16	11.6	16.10	Generally cloudy. Moderate and heavy rain early; shower in late afternoon. Fresh SW'ly wind 02.30h.; fresh to strong SSW'ly wind 08.10h., 11—20.30h.
Monday	17	9.7	16.07	Fine, becoming cloudy by 0.9h.; then fair by early evening. Showers in morning, and moderate shower in early afternoon. Fresh to strong SSW'ly wind 11.30—13h., 14—16h., and fresh 0.7—13.30h., 13—14h., 16—16.30h., 17.20—18h. Dew in morning.
Tuesday	18	1.8	16.03	Cloudy. Intermittent light rain in afternoon. Fresh SSW'ly wind 09—18h. Dew in morning.
Wednesday ..	19	5.2	15.98	Generally cloudy, becoming fine in evening. Dew in evening.
Thursday	20	3.9	15.95	Generally cloudy. Intermittent light drizzle in early morning. Dew in evening.
Friday	21	5.1	15.90	Generally cloudy; continuous moderate and heavy rain in morning with thunder and lightning 06.10—06.54h. (from ESE—SW). Moderate shower in early evening.
Saturday	22	5.6	15.85	Cloudy with intermittent light rain in afternoon and evening. Fresh SSW'ly wind 11—16h., 19—20h. Dew in morning.
		Sum 42.9	Sum 111.88	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h., 6h. and 9h. P.M. The readings of the barometer, dry bulb thermometer and the wet bulb thermometer are the means of 24 hourly values derived from photographic records, and the relative humidity is similarly a mean of 24 hourly values computed from the dry and wet bulb readings by means of Jelinek's Tables of Humidity. The dew point temperature is deduced from the daily means of dry and wet bulb thermometers.

The average temperature of the air is that derived from a discussion of the observations made at Kew during the 70 years ending 1940, and that of horizontal movement of the air from a discussion of the anemometric records for the 35 years ending 1915. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and − "*lower*" than the average.

The numbers in columns 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer increased from 29.59 ins. at 03.55h. on 16th; to 30.27 ins. by 10.10h. on 19th; then decreased to 29.61 ins. by 24.00h. on 22nd.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included.*

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

Estimates of Births. England and Wales.

(a) Final estimate of live births to be expected in the **quarter ending 30th September, 1950** **174,000**

(b) Provisional estimate of live births to be expected in the **quarter ending 31st December, 1950** **160,000**

In the above estimates regard has been had to (1) sample returns of the number of special ration books issued to expectant mothers by the Ministry of Food, and (2) the recent trend of registered live births. The sample comprises some 200 Food Office areas containing about 25 per cent. of the population.

Acute Poliomyelitis. England and Wales.

Weekly notifications * of acute poliomyelitis in 1950 compared with those in 1949, 1948 and 1947.

Week Ended	May 6	May 13	May 20	May 27	June 3	June 10	June 17	June 24	July 1	July 8	July 15	July 22	July 29	Aug 5	Aug 12	Aug 19	Aug 26	Sept 2	Sept 9	Sept 16	Sept 23	Sept 30
Year: 1950	25	22	25	50	37	79	93	142	160	212	212	261	305

* Not corrected for revision of diagnosis.

BLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) **London.**
(b) **Great Towns in the aggregate.**

(*See Notes on page 2*)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

Week ended:—	May 20	May 27	June 3	June 10	June 17	June 24	July 1	July 8	July 15	July 22	July 29	Totals from 1st Week of year, in Great Towns *ONLY* 1950.	1949.	1948.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term " Influenza " is mentioned on the certificate, e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 29th July, 1950, with totals from the first week of the year to date. } **London.**

(See Notes on page 2)

Abbreviated List No.*	Causes of Death	Deaths registered from 1st week of the year. 1950	Deaths registered during current week: All Ages.	Under 4 weeks	4 weeks—1 year.	1–5 years.	5–15 years.	15–25 years.	25–35 years.	35–45 years.	45–55 years.	55–65 years.	65–75 years.	75 years and over.

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 29th July, 1950. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page 2*)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. B	Meningococcal infection. D	Acute poliomyelitis: Paralytic E	Acute poliomyelitis: Non-paralytic F	Acute encephalitis: Infective G	Acute encephalitis: Post Infectious K	Typhus fever. H	Relapsing fever. Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

DATE. July		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	23	4.7	15.82	Cloudy. Light and moderate rain in morning and showers in afternoon. Fresh SW—WSW'ly winds 0.2h.—21h.
Monday	24	12.6	.78	Cloudy, becoming fine in evening. Dew in morning.
Tuesday	25	0.1	.72	Cloudy, with light to moderate rain intermittently. Dew early morning.
Wednesday ..	26	12.4	.68	Cloudy. Dew in morning.
Thursday	27	14.4	.62	Fine, except for partly cloudy periods in afternoon. Dew in morning.
Friday	28	8.6	.58	Cloudy, becoming fine in evening. Dew in morning.
Saturday	29	13.2	15.53	Fine early, becoming cloudy. Dew in morning.
		Sum 66.0	Sum 109.73	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h., 6h. and 9h. P.M. The readings of the barometer, dry bulb thermometer and the wet bulb thermometer are the means of 24 hourly values derived from photographic records, and the relative humidity is similarly a mean of 24 hourly values computed from the dry and wet bulb readings by means of Jelinek's Tables of Humidity. The dew point temperature is deduced from the daily means of dry and wet bulb thermometers.

The average temperature of the air is that derived from a discussion of the observations made at Kew during the 70 years ending 1940, and that of horizontal movement of the air from a discussion of the anemometric records for the 35 years ending 1915. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and − "*lower*" than the average.

The numbers in columns 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 29.61 ins. at the beginning of the week to 29.55 ins. by 05.05h. on 23rd; then rose to 30.10 ins. by 11-30h. on 27th; falling to 29.95 ins. by 16.55h. on 28th; then rising to 30.14 ins. by 24h. on 29th.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available:—

Monthly (a) Deaths from smallpox—about the fourth week following the month.

(b) Survey of Sickness data: Monthly Sickness rates, sickness Prevalence rates and Incapacity rates, by Quarters, with rates for the last three available months—about the last week of each month. (The usual detailed analyses will continue to be published in the Registrar General's Quarterly Returns).

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

Acute Poliomyelitis.

Weekly notifications * of acute poliomyelitis in 1950 compared with those in 1949, 1948 and 1947.

* Not corrected for revision of diagnosis.

BLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) **London.**

(b) **Great Towns in the aggregate.**

(*See Notes on page* 2)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 5th August, 1950, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 5th August, 1950. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page 2*)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	A Cholera.	B Plague.	D Meningococcal infection.	E F Acute poliomyelitis: Paralytic	Non-paralytic	G K Acute encephalitis: Infective	Post Infectious	H Typhus fever.	I Relapsing fever.	J Continued fever. (London only).	L Dysentery.	M Ophthalmia neonatorum.	N C Puerperal pyrexia and Puerperal fever.	O Smallpox.	P Paratyphoid fever.	R Typhoid fever.	S Food poisoning.

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian populatio over school-leaving age and not retired from regular employment, who are either employed under contract of service or self-employed (i.e., working on own account). Certain comparatively sma classes (e.g., those married women, employed or self-employed, who rely on their husbands' insuranc for benefit and persons who, because their employment is inconsiderable, are treated as non-employed are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, bu this does not impair their validity as an indication of incapacity for work as claims have to b supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are fo periods of five weeks.

TABLE VII.—*continued.*

DATE. July		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	30	0.1	15.48	Cloudy, with intermittent light rain morning and afternoon, light to moderate in evening. Dew in morning.
Monday	31	10.5	15.43	Cloudy, with slight rain early morning. Fair in evening.
August				
Tuesday	1	8.6	15.38	Cloudy to fair most of day, light rain early.
Wednesday ..	2	6.6	15.33	Cloudy all day. Moderate to heavy showers in morning and afternoon, with thunder and lightning.
Thursday	3	6.6	15.27	Fair early and late; cloudy during day. Fresh NNW'ly winds 09.30—13h. Dew in morning.
Friday	4	12.4	15.23	Fair to fine all day. Dew in morning and evening.
Saturday	5	7.9	15.17	Fair to cloudy all day. Dew in morning and evening.
		Sum 52.7	Sum 107.29	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h., 6h. and 9h. P.M. The readings of the barometer, dry bulb thermometer and the wet bulb thermometer are the means of 24 hourly values derived from photographic records, and the relative humidity is similarly a mean of 24 hourly values computed from the dry and wet bulb readings by means of Jelinek's Tables of Humidity. The dew point temperature is deduced from the daily means of dry and wet bulb thermometers.

The average temperature of the air is that derived from a discussion of the observations made at Kew during the 70 years ending 1940, and that of horizontal movement of the air from a discussion of the anemometric records for the 35 years ending 1915. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and − "*lower*" than the average.

The numbers in columns 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 30.14 ins. at the beginning of the week to 29.65 ins. by 13h. on 2nd, then increased to 30.07 ins. at 07.40h. on 5th and decreased to 29.99 ins at 24h. on 5th.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available:—

Monthly (a) Deaths from smallpox—about the fourth week following the month.

(b) Survey of Sickness data: Monthly Sickness rates, sickness Prevalence rates and Incapacity rates, by Quarters, with rates for the last three available months—about the last week of each month. (The usual detailed analyses will continue to be published in the Registrar General's Quarterly Returns).

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

Acute Poliomyelitis.

Weekly notifications * of acute poliomyelitis in 1950 compared with those in 1949, 1948 and 1947.

* Not corrected for revision of diagnosis.

ABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) **London.**
(b) **Great Towns in the aggregate.**

(*See Notes on page 2*)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 12th August, 1950, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 12th August, 1950. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page 2*)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

TABLE VI.—Air Temperature and Rainfall in the week ended 12th August, 1950.

Certain Great Towns in England and Wales and four Scottish and Irish Towns.

TABLE VII.—*continued.*

DATE. August		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	6	7.7	15.12	Cloudy, then fair in evening. Dew in morning.
Monday	7	5.5	15.07	Cloudy, then fine in evening. A light shower in afternoon. Dew in morning.
Tuesday	8	4.1	15.02	Cloudy. Fresh SSW'ly wind 12—13h.; intermittent light rain in afternoon and early evening. Dew in morning.
Wednesday ..	9	6.6	14.95	Cloudy until afternoon, then fair. Light rain early; continuous moderate in morning. Fresh SSW'ly wind 13—18-30h.; fresh to strong at 17h.
Thursday	10	6.3	14.90	Cloudy until early evening, then fair to fine. Dew in morning.
Friday	11	1.9	14.85	Fair early, then cloudy. Dew in morning.
Saturday	12	2.3	14.80	Cloudy. Intermittent light rain in afternoon and evening. Moderate at times.
		Sum 34.4	Sum 164.71	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h., 6h. and 9h. P.M. The readings of the barometer, dry bulb thermometer and the wet bulb thermometer are the means of 24 hourly values derived from photographic records, and the relative humidity is similarly a mean of 24 hourly values computed from the dry and wet bulb readings by means of Jelinek's Tables of Humidity. The dew point temperature is deduced from the daily means of dry and wet bulb thermometers.

The average temperature of the air is that derived from a discussion of the observations made at Kew during the 70 years ending 1940, and that of horizontal movement of the air from a discussion of the anemometric records for the 35 years ending 1915. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and − "*lower*" than the average.

The numbers in columns 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 29.99 ins. at the beginning of the week to 29.68 ins. by 04.25h. on 9th; then increased to 30.21 ins. at 09h. on 11th; decreasing to 30.04 ins. at 24th on 12th.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables 1, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

Sickness Rates and Days of Incapacity. England and Wales.

Monthly Rates per 100 persons interviewed.

Based on the results of sample interviews carried out for the Registrar General by the Social Survey of the Central Office of Information.

* Not corrected for revision of diagnosis.

ABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) **London.**

(b) **Great Towns in the aggregate.**

(*See Notes on page* 2)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 19th August, 1950, with totals from the first week of the year to date. } **London.**

(*See Notes on page 2*)

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 19th August, 1950. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page 2*)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

TABLE VII.—*continued.*

DATE. August		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	13	7.6	14.73	Cloudy to fair; fine late. Light rain in early morning.
Monday	14	11.2	14.67	Fine until mid-afternoon, then cloudy. Dew in morning.
Tuesday	15	0.0	14.62	Cloudy. Intermittent light rain during day; moderate to heavy in evening.
Wednesday ..	16	12.1	14.55	Cloudy to fair. Light rain with squall in early morning. Fresh NW—N wind 03.30h.
Thursday	17	1.9	14.50	Cloudy all day, and fine late. Rain and showers during day. Fresh to strong S'ly winds 10h.—13h. Dew in morning.
Friday	18	9.3	14.43	Cloudy. Intermittent showers during day; heavy in evening. Distant thunder in early afternoon. Fresh SW'ly winds 10—16h. Dew in morning.
Saturday	19	5.4	14.37	Cloudy during day, and fine in evening. Dew in evening.
		Sum 47.5	Sum 101.87	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h., 6h. and 9h. P.M. The readings of the barometer, dry bulb thermometer and the wet bulb thermometer are the means of 24 hourly values derived from photographic records, and the relative humidity is similarly a mean of 24 hourly values computed from the dry and wet bulb readings by means of Jelinek's Tables of Humidity. The dew point temperature is deduced from the daily means of dry and wet bulb thermometers.

The average temperature of the air is that derived from a discussion of the observations made at Kew during the 70 years ending 1940, and that of horizontal movement of the air from a discussion of the anemometric records for the 35 years ending 1915. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and − "*lower*" than the average.

The numbers in columns 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer increased from 30.04 ins. at the beginning of the week to 30.14 ins. by 07.35h. on 14th; then decreased to 29.47 ins. at 19.20h. on 17th; and increased to 30.01 ins. at 24h. on 19th.

J.401. K.13 8/50. Wt. 6—Ps. 57. R.J. & Co. S. G.437 (Emergency).

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available:—

Monthly (a) Deaths from smallpox—about the fourth week following the month.

(b) Survey of Sickness data: Monthly Sickness rates, sickness Prevalence rates and Incapacity rates, by Quarters, with rates for the last three available months—about the last week of each month. (The usual detailed analyses will continue to be published in the Registrar General's Quarterly Returns).

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

Smallpox

There were no deaths from smallpox registered during the month of July.

Acute Poliomyelitis.

Weekly notifications * of acute poliomyelitis in 1950 compared with those in 1949, 194 and 1947. *See* also Table IV.

Week Ended	June 3	June 10	June 17	June 24	July 1	July 8	July 15	July 22	July 29	Aug 5	Aug 12	Aug 19	Aug 26	Sept 2	Sept 9	Sept 16	Sept 23	Sept 30	Oct 7	Oct 14	Oct 21	O 2

* Not corrected for revision of diagnosis.

TABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years. (a) **London.** (b) **Great Towns in the aggregate.**

(*See Notes on page* 2)

***Note*:**—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 26th August, 1950, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 26th August, 1950. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page 2*)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

TABLE VII.—*continued.*

DATE. August		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	20	7.9	14.32	Cloudy during day, and fair in evening. Intermittent light rain in early morning. Fresh S'ly winds 09h.—17.30h.
Monday	21	8.8	14.25	Cloudy until mid-afternoon, then fair. Dew in morning and evening.
Tuesday	22	5.3	14.20	Cloudy all day. Slight shower in morning. Dew early.
Wednesday ..	23	7.6	14.12	Cloudy, becoming fair to fine. Light rain in afternoon. Dew in morning and evening.
Thursday	24	9.0	14.07	Cloudy, becoming fair. Light rain early. Heavy shower in morning. Violent shower in afternoon with thunder and lightning. Fresh to strong S—SSW'ly winds 11h.—19h.
Friday	25	9.9	14.00	Cloudy, with fine period in afternoon. Fresh SSW'ly wind 12h.—15h. Dew early and in evening.
Saturday	26	7.0	13.93	Cloudy becoming fine in late evening. Heavy rain early morning, and heavy shower in afternoon. Fresh to strong SSW'ly winds 10.45h.—14.30h., and 17h—17.30h.
		Sum 55.5	Sum 98.89	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h., 6h. and 9h. P.M. The readings of the barometer, dry bulb thermometer and the wet bulb thermometer are the means of 24 hourly values derived from photographic records, and the relative humidity is similarly a mean of 24 hourly values computed from the dry and wet bulb readings by means of Jelinek's Tables of Humidity. The dew point temperature is deduced from the daily means of dry and wet bulb thermometers.

The average temperature of the air is that derived from a discussion of the observations made at Kew during the 70 years ending 1940, and that of horizontal movement of the air from a discussion of the anemometric records for the 35 years ending 1915. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and − "*lower*" than the average.

The numbers in columns 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 30.01 ins. at the beginning of the week to 29.71 ins. by 13.25h. on 24th; then increased to 29.91 ins. at 08.30h. on 25th; and decreased to 26.65 ins. by 13.00h. on 26th; and increased to 29.97 ins. at 24.00h. on 26th.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director Meteorological Office.

2. Definitions of areas.—" London "=administrative county of London: " Great Towns "=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; " C.B."=county borough, " M.B."=municipal borough; " U.D."=urban district. " Greater London "=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available:—

Monthly (a) Deaths from smallpox—about the fourth week following the month.

(b) Survey of Sickness data: Monthly Sickness rates, sickness Prevalence rates and Incapacity rates, by Quarters, with rates for the last three available months—about the last week of each month. (The usual detailed analyses will continue to be published in the Registrar General's Quarterly Returns).

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

Acute Poliomyelitis.

Weekly notifications * of acute poliomyelitis in 1950 compared with those in 1949, 1948 and 1947. *See* also Table IV.

Week Ended	June 3	June 10	June 17	June 24	July 1	July 8	July 15	July 22	July 29	Aug 5	Aug 12	Aug 19	Aug 26	Sept 2	Sept 9	Sept 16	Sept 23	Sept 30	Oct 7	Oct 14	Oct 21	Oc 2

* Not corrected for revision of diagnosis.

E I.—Births, Deaths (distinguishing Deaths of nfants under 1 year of age) and Notifications of ertain Infectious Diseases in the last 11 weeks with otals for the current and the two preceding years.

(a) **London.**
(b) **Great Towns in the aggregate.**

(*See Notes on page 2*)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 2nd September, 1950, with totals from the first week of the year to date. } **London.**

(*See Notes on page 2*)

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 2nd September, 1950. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page 2*)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

TABLE VII.—*continued.*

DATE. August		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	27	8.2	13.88	Cloudy until late afternoon, then fine. A shower in morning and afternoon. Dew in morning and evening.
Monday	28	1.1	13.82	Cloudy. Thunder at mid-day. Intermittent light rain in morning, showers in afternoon, rain later. Dew in morning and evening.
Tuesday	29	10.9	13.77	Fair. Dew in evening.
Wednesday ..	30	1.4	13.68	Cloudy. Light rain and showers in morning. Showers and rain, continuous moderate and heavy, late afternoon. Light rain in evening. Fresh S wind 12.15h. and SW 16.10h. Dew in morning.
Thursday	31	0.0	13.62	Cloudy. Light rain early, continuous moderate and heavy rain 11.20h.—15.20h., with a thunderstorm. Light rain in evening. Fog at 09h.
September				
Friday .. .	1	6.0	13.57	Cloudy until about 09.30h., then fair until mid-afternoon, then cloudy. Light to moderate rain late evening.
Saturday	2	9.8	13.50	Cloudy until mid-afternoon, then fair, becoming fine late. Moderate and light rain early morning. Fresh NNW winds 08h.—17h.
		Sum 37.4	Sum 95.84	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h., 6h. and 9h. P.M. The readings of the barometer, dry bulb thermometer and the wet bulb thermometer are the means of 24 hourly values derived from photographic records, and the relative humidity is similarly a mean of 24 hourly values computed from the dry and wet bulb readings by means of Jelinek's Tables of Humidity. The dew point temperature is deduced from the daily means of dry and wet bulb thermometers.

The average temperature of the air is that derived from a discussion of the observations made at Kew during the 70 years ending 1940, and that of horizontal movement of the air from a discussion of the anemometric records for the 35 years ending 1915. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and − "*lower*" than the average.

The numbers in columns 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer increased from 29.78 ins. at the beginning of the week to 29.89 ins. by 22.50h. on 27th; decreased to 29.72 ins. by 19h. on 28th, increased to 30.09 ins. by 07.30h. on 30th; then decreased to 29.81 ins. by 04.50h. on 2nd; and increased to 30.07 ins. by 24h. on 2nd.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables 1, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available:—

Monthly (a) Deaths from smallpox—about the fourth week following the month.

(b) Survey of Sickness data: Monthly Sickness rates, sickness Prevalence rates and Incapacity rates, by Quarters, with rates for the last three available months—about the last week of each month. (The usual detailed analyses will continue to be published in the Registrar General's Quarterly Returns).

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

Acute Poliomyelitis.

Weekly notifications * of acute poliomyelitis in 1950 compared with those in 1949, 1948 and 1947. *See* also Table IV.

*Not corrected for revision of diagnosis.

TABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years. (a) **London.** (b) **Great Towns in the aggregate.**

(*See Notes on page* 2)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

** Return not received.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 9th September, 1950, with totals from the first week of the year to date. } **London.**

(*See Notes on page 2*)

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 9th September, 1950. } **England and Wales, Administrative Areas and Port Health Districts.**

(See Notes on page 2)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. B	Meningococcal infection. Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

DATE, September		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	3	0.0	13.45	Cloudy. Light to moderate rain in morning. Intermittent drizzle in afternoon.
Monday	4	7.4	13.37	Cloudy all day.
Tuesday	5	10.4	13.30	Cloudy until mid-morning; fair rest of day. Light to moderate rain early.
Wednesday ..	6	3.7	13.25	Fine early, cloudy rest of day. Light and moderate rain in afternoon and evening. Fresh to strong SW winds 13h.—24h.
Thursday	7	8.2	13.18	Cloudy until early afternoon, then fair to fine. Moderate and heavy rain early morning. Fresh to strong SW winds 0h.—03.45. 07.30h.. 09h.—16.30h.
Friday	8	2.2	13.12	Fair early, cloudy rest of day. Light to moderate and heavy rain in afternoon, light rain in evening.
Saturday	9	1.3	13.05	Cloudy. Light to moderate rain in morning. moderate shower in late afternoon.
		Sum 33.2	Sum 92.72	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h., 6h. and 9h. P.M. The readings of the barometer, dry bulb thermometer and the wet bulb thermometer are the means of 24 hourly values derived from photographic records, and the relative humidity is similarly a mean of 24 hourly values computed from the dry and wet bulb readings by means of Jelinek's Tables of Humidity. The dew point temperature is deduced from the daily means of dry and wet bulb thermometers.

The average temperature of the air is that derived from a discussion of the observations made at Kew during the 70 years ending 1940, and that of horizontal movement of the air from a discussion of the anemometric records for the 35 years ending 1915. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and − "*lower*" than the average.

The numbers in columns 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 30.07 ins. at the beginning of the week to 29.84 ins. by 18.50h. on 3rd, then increased to 30.02 ins. at 02.30h. on 6th; fell to 29.39 ins. by 24h. on 6th; and increased to 29.99 ins. by 10h. on 8th; then decreased to 29.79 ins. at 06.10h. on 9th; and increased to 29.83 ins. by 24h. on 9th.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables 1, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

Sickness Rates and Days of Incapacity. England and Wales.

Monthly Rates per 100 persons interviewed.

Based on the results of sample interviews carried out for the Registrar General by the Social Survey of the Central Office of Information.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term " Influenza " is mentioned on the certificate e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 16th September, 1950, with totals from the first week of the year to date. } **London.**

(*See Notes on page 2*)

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 16th September, 1950. — **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page* 2)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. B	Meningococcal infection. D	Acute poliomyelitis E	Paralytic F	Non-paralytic G	Acute encephalitis	Infective G	Post Infectious K	Typhus fever. H	Relapsing fever. I	Continued fever. (London only). J	Dysentery. L	Ophthalmia neonatorum. M	Puerperal pyrexia and Puerperal fever. N C	Smallpox. O	Paratyphoid fever. P	Typhoid fever. R	Food poisoning. S

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

TABLE VII.—*continued.*

DATE. September		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	10	7.5	12.98	Cloudy until evening; then fair to fine. Light moderate. and heavy rain early.
Monday	11	1.5	12.92	Partly cloudy early; cloudy rest of day. Slight drizzzle in morning; moderate and heavy rain at mid-day. Fresh SSW—SW winds 09h.—24h.
Tuesday	12	4.3	12.85	Fair early and late; cloudy during day. Fresh SW winds 0h.—05h., 13h.—14h., 17h.—18h.
Wednesday ..	13	5.5	12.80	Fair early and late; cloudy during day. Fresh SSW—S winds 08h.—18h., 21.30h.—24h. Dew in morning.
Thursday	14	7.0	12.73	Cloudy until evening, then fair to fine. Slight to moderate rain early. Fresh SSW winds 0h.—02.15h., 10.30h.—18h. Dew in evening.
Friday	15	0.2	12.65	Cloudy all day. Heavy rain; light to moderate rain in morning; thunderstorm with heavy rain in early evening.
Saturday	16	4.6	12.60	Fair in morning, cloudy rest of day. Light to moderate rain late. Fresh to strong S winds 11h.—24h. Dew in morning.
		Sum 30.6	Sum 89.53	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h., 6h. and 9h. P.M. The readings of the barometer, dry bulb thermometer and the wet bulb thermometer are the means of 24 hourly values derived from photographic records, and the relative humidity is similarly a mean of 24 hourly values computed from the dry and wet bulb readings by means of Jelinek's Tables of Humidity. The dew point temperature is deduced from the daily means of dry and wet bulb thermometers.

The average temperature of the air is that derived from a discussion of the observations made at Kew during the 70 years ending 1940, and that of horizontal movement of the air from a discussion of the anemometric records for the 35 years ending 1915. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and − "*lower*" than the average.

The numbers in columns 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer increased from 29.83 ins. at the beginning of the week to 30.10 ins. by 13h. on 12th; then decreased to 29.47 ins. at 14h. on 15th; then increased to 29.90 ins. at 09h. on 16th; and decreased to 29.55 ins. by 24h. on 16th.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

Acute Poliomyelitis. England and Wales.

Weekly notifications * of acute poliomyelitis in 1950 compared with those in 1949, 1948 and 1947. *See* also Table IV.

*Not corrected for revision of diagnosis.

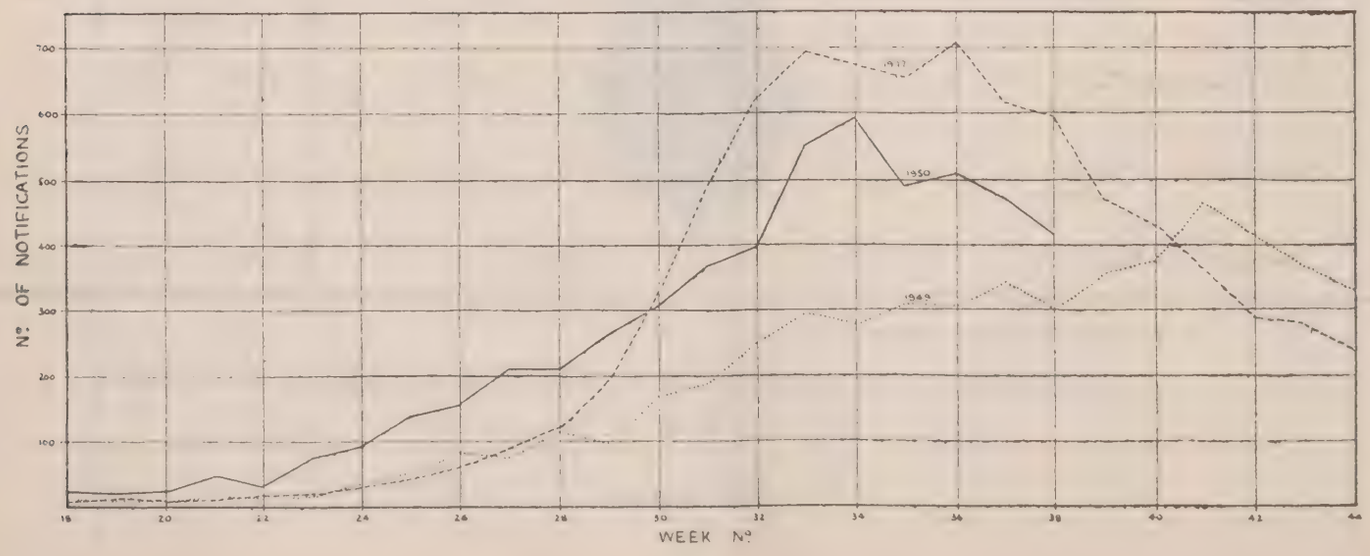

TABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years. (a) **London.** (b) **Great Towns in the aggregate.**

(*See Notes on page 2*)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 23rd September, 1950, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 23rd September, 1950. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page 2*)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

TABLE VI.—Air Temperature and Rainfall in the week ended 23rd September, 1950.

DATE. September		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	17	7.9	12.53	Cloudy until late evening, then fine. Light to moderate showers during day. Fresh to strong S—SW winds 0h.—19h.
Monday	18	10.4	12.47	Fine until around 11h.; fair to fine rest of day. Fresh W wind 08h.—18h.
Tuesday	19	0.6	12.40	Cloudy all day. Light drizzle in morning; rain in evening. Dew in morning.
Wednesday ..	20	6.3	12.33	Cloudy until late afternoon, then fair. Rain early, showers during day. Fresh WSW wind 12-15h., 15h.—17h.
Thursday	21	6.1	12.27	Cloudy to fair until late evening, then fine. Light showers in afternoon. Dew in morning.
Friday	22	6.5	12.20	Cloudy until late afternoon, then fair to fine. Light showers during day; heavy shower at 13-10h. Fresh SW wind 12h.—13h. Dew in morning.
Saturday	23	5.0	12.15	Cloudy all day. Light rain in evening. Dew in morning.
		Sum 42.8	Sum 86.35	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h., 6h. and 9h. P.M. The readings of the barometer, dry bulb thermometer and the wet bulb thermometer are the means of 24 hourly values derived from photographic records, and the relative humidity is similarly a mean of 24 hourly values computed from the dry and wet bulb readings by means of Jelinek's Tables of Humidity. The dew point temperature is deduced from the daily means of dry and wet bulb thermometers.

The average temperature of the air is that derived from a discussion of the observations made at Kew during the 70 years ending 1940, and that of horizontal movement of the air from a discussion of the anemometric records for the 35 years ending 1915. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and − "*lower*" than the average.

The numbers in columns 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 29.55 ins. at the beginning of the week to 29.49 ins. by 04.20h. on 17th then increased to 29.94 ins. by 23h. on 18th; and decreased to 29.61 ins. by 04h. on 21st; increased to 30.25 ins. by 08.05 ins. on 23rd and decreased to 30.12 ins. by 24h. on 23rd.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available :—

Monthly (a) Deaths from smallpox—about the fourth week following the month.

(b) Survey of Sickness data: Monthly Sickness rates, sickness Prevalence rates and Incapacity rates, by Quarters, with rates for the last three available months—about the last week of each month. (The usual detailed analyses will continue to be published in the Registrar General's Quarterly Returns).

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

Smallpox

There were no deaths from Smallpox registered during the month of August.

Acute Poliomyelitis.

Weekly notifications * of acute poliomyelitis in 1950 compared with those in 1949, 1948 and 1947. *See* also Table IV.

*Not corrected for revision of diagnosis.

TABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) **London.**

(b) **Great Towns in the aggregate.**

(*See Notes on page 2*)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 30th September, 1950, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 30th September, 1950. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page 2*)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed) are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

TABLE VI.—Air Temperature and Rainfall in the week ended 30th September, 1950. } **Certain Great Towns in England and Wales and four Scottish and Irish Towns.**

TABLE VII.—*continued.*

DATE. September		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	24	0.0	12.07	Cloudy all day; light to moderate rain most of day, with heavy rain, early in afternoon, and late. Fresh SW wind 08.30h.—20.30h.
Monday	25	4.6	12.00	Cloudy all day; light to moderate showers in morning, afternoon, and evening.
Tuesday	26	0.5	11.95	Cloudy all day; light to moderate rain in morning, light in afternoon. (Blue moon seen in London area).
Wednesday ..	27	1.3	11.88	Cloudy all day with intermittent light rain in evening. Fresh SW wind 13h.—18h. Dew in morning.
Thursday	28	1.4	11.82	Cloudy all day with light rain in evening.
Friday	29	1.3	11.75	Cloudy all day wilth intermittent light drizzle in morning, and light rain in evening.
Saturday	30	0.0	11.68	Cloudy with light to moderate rain in morning and afternoon; light in evening.
		Sum 9.1	Sum 83.15	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h., 6h. and 9h. P.M. The readings of the barometer, dry bulb thermometer and the wet bulb thermometer are the means of 24 hourly values derived from photographic records, and the relative humidity is similarly a mean of 24 hourly values computed from the dry and wet bulb readings by means of Jelinek's Tables of Humidity. The dew point temperature is deduced from the daily means of dry and wet bulb thermometers.

The average temperature of the air is that derived from a discussion of the observations made at Kew during the 70 years ending 1940, and that of horizontal movement of the air from a discussion of the anemometric records for the 35 years ending 1915. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and − "*lower*" than the average.

The numbers in columns 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 30.12 ins. at the beginning of the week to 29.40 ins. by 15.30h. on 25th, and increased to 30.25 ins. at 08.55h. on 27th, and decreased to 29.51 ins. by 24h. on 30th.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office.

2. Definitions of areas.—" London "=administrative county of London: " Great Towns "=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; " C.B."=county borough, " M.B."=municipal borough; " U.D."=urban district. " Greater London "=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available :—

Monthly (a) Deaths from smallpox—about the fourth week following the month.

(b) Survey of Sickness data: Monthly Sickness rates, sickness Prevalence rates and Incapacity rates, by Quarters, with rates for the last three available months—about the last week of each month. (The usual detailed analyses will continue to be published in the Registrar General's Quarterly Returns).

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

Acute Poliomyelitis.

Weekly notifications * of acute poliomyelitis in 1950 compared with those in 1949, 1948 and 1947. *See* also Table IV.

*Not corrected for revision of diagnosis.

ABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years. (a) **London.** (b) **Great Towns in the aggregate.**

(*See Notes on page 2*)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term " Influenza " is mentioned on the certificate e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 7th October, 1950, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 7th October, 1950. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page 2*)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

TABLE VII.—*continued.*

DATE. October		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	1	7.0	11.60	Fair in morning, becoming cloudy, and fine late. Light to moderate rain early, heavy at 03.05h., intermittent in evening. Fresh W-SW winds 03h., 06h.—19h.
Monday	2	4.2	11.55	Cloudy until late evening, then fair. Light rain early, showers during day, moderate in evening, with heavy rain 17.55h. Fresh to strong SW winds 10h.—15.30h.
Tuesday	3	5.3	11.48	Fair early, then cloudy rest of day. Dew in morning.
Wednesday .	4	1.0	11.43	Cloudy until early evening, then fine. Intermittent light drizzle in morning.
Thursday . ..	5	10.1	11.37	Fine all day. Dew in morning and evening.
Friday	6	3.5	11.28	Fine early, becoming fair to cloudy. Intermittent light rain in morning. Fresh SW wind 09h.—14h. and 20h.
Saturday .	7	0.0	11.23	Cloudy all day. Light rain in afternoon, and light shower later. Fresh SW wind 09h.—13h.
		Sum 31.1	Sum 79.94	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h., 6h. and 9h. P.M. The readings of the barometer, dry bulb thermometer and the wet bulb thermometer are the means of 24 hourly values derived from photographic records, and the relative humidity is similarly a mean of 24 hourly values computed from the dry and wet bulb readings by means of Jelinek's Tables of Humidity. The dew point temperature is deduced from the daily means of dry and wet bulb thermometers.

The average temperature of the air is that derived from a discussion of the observations made at Kew during the 70 years ending 1940, and that of horizontal movement of the air from a discussion of the anemometric records for the 35 years ending 1915. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and − "*lower*" than the average.

The numbers in columns 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer increased from 29.51 ins. at the beginning of the week to 30.18 ins. by 10.45h. on 3rd, then decreased to 29.89 ins. by 07h. on 6th, increased to 30.03 ins. by 01h. on 7th, and decreased to 29.96 ins. by 24h. on 7th.

J.951 K.13 10/50. Wt. 6—Ps. 59. R.J. & Co. S. G.437 (Emergency). 70—9999 PRINTED IN GREAT BRITAIN.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director Meteorological Office.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns" =London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931. "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946 i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

ENGLAND AND WALES

BIRTHS AND DEATHS registered in the Quarter ended 30th September, 1950, with comparative figures for the third Quarters of three earlier years. (The customary analysis will appear in the QUARTERLY RETURN in due course).

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

** Return not received.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 14th October, 1950, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 14th October, 1950. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page 2*)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. B	Meningococcal infection. D	Acute polio-myelitis: Paralytic E	Acute polio-myelitis: Non-paralytic F	Acute encephalitis: Infective G	Acute encephalitis: Post Infectious K	Typhus fever. H	Relapsing fever. I	Continued fever. (London only). J	Dysentery. L	Ophthalmia neonatorum. M	Puerperal pyrexia and Puerperal fever. N C	Smallpox. O	Paratyphoid fever. P	Typhoid fever. R	Food poisoning. S

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

TABLE VII.—*continued.*

DATE. October		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	8	4.4	11.17	Cloudy until early evening, then fair, becoming fine. Fresh SW winds 10.45h., 11.30h., 12—14.45h., 16.45h. A heavy shower at 14.30h.
Monday	9	0.4	11.12	Fair early, becoming cloudy by 0.9h. and remaining so. Dew in morning.
Tuesday	10	2.2	11.03	Cloudy, with light rain in evening.
Wednesday ..	11	7.8	10.98	Fair to fine early, cloudy at noon until mid-evening. then fair. Fog in evening. Dew morning and evening.
Thursday	12	8.3	10.90	Cloudy early, generally fair from 0.9h., becoming fine in evening. Dew in morning and evening.
Friday	13	7.7	10.85	Fine in morning, generally cloudy rest of day. Light to moderate rain late evening. Dew in morning.
Saturday	14	7.6	10.78	Generally cloudy, with breaks about 0.6h. Light to moderate rain early. Dew morning and evening.
		Sum 38.4	Sum 76.83	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h., 6h. and 9h. P.M. The readings of the barometer, dry bulb thermometer and the wet bulb thermometer are the means of 24 hourly values derived from photographic records, and the relative humidity is similarly a mean of 24 hourly values computed from the dry and wet bulb readings by means of Jelinek's Tables of Humidity. The dew point temperature is deduced from the daily means of dry and wet bulb thermometers.

The average temperature of the air is that derived from a discussion of the observations made at Kew during the 70 years ending 1940, and that of horizontal movement of the air from a discussion of the anemometric records for the 35 years ending 1915. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and − "*lower*" than the average.

The numbers in columns 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 29.96 ins. at the beginning of the week to 29.77 ins. by 14.10h. on the 8th, increased to 30.06 ins. by 0.9h. on the 9th, decreased to 29.79 ins. by 03.40h. on the 10th, increased to 30.51 ins. by 22.15h. on the 11th, then decreased to 29.90 ins. by 23h. on the 13th, and increased to 29.99 ins. by 24h. on the 14th.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

Sickness Rates and Days of Incapacity. England and Wales.

Monthly Rates per 100 persons interviewed.

Based on the results of sample interviews carried out for the Registrar General by the Social Survey of the Central Office of Information.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 21st October, 1950, with totals from the first week of the year to date. } **London.**

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed) are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

TABLE VI.—Air Temperature and Rainfall in the week ended 21st October, 1950.

TABLE VII.—*continued.*

DATE. October		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	15	2.2	10.72	Cloudy, with thick fog 05.30h.—06.15h.; moderate fog 06.15h.—08h. Frost in morning.
Monday	16	4.9	10.65	Fine until early afternoon, then fair in early evening, becoming fair later. Fog 01h.—09.30h., thick 06.30h.—09.15h. Dew in morning and evening.
Tuesday	17	0.0	10.58	Cloudy, with intermittent light rain and drizzle morning and afternoon.
Wednesday ..	18	2.8	10.52	Cloudy. Dew in morning.
Thursday	19	4.0	10.45	Generaly cloudy, with light drizzle in late afternoon. Dew in morning.
Friday	20	0.0	10.40	Cloudy. Dew in evening.
Saturday	21	1.6	10.33	Cloudy. Dew in morning.
		Sum 15.5	Sum 73.65	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h., 6h. and 9h. P.M. The readings of the barometer, dry bulb thermometer and the wet bulb thermometer are the means of 24 hourly values derived from photographic records, and the relative humidity is similarly a mean of 24 hourly values computed from the dry and wet bulb readings by means of Jelinek's Tables of Humidity. The dew point temperature is deduced from the daily means of dry and wet bulb thermometers.

The average temperature of the air is that derived from a discussion of the observations made at Kew during the 70 years ending 1940, and that of horizontal movement of the air from a discussion of the anemometric records for the 35 years ending 1915. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and − "*lower*" than the average.

The numbers in columns 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer increased from 29.99 ins. at the beginning of the week to 30.33 ins. by 21.40h. on 20th and decreased to 30.27 ins. by 24h. on 21st.

GENERAL REGISTER OFFICE

THE REGISTRAR GENERAL'S WEEKLY RETURN FOR ENGLAND AND WALES

BIRTHS AND DEATHS, INFECTIOUS DISEASES, WEATHER

WEEK ENDED

SATURDAY, 28th OCTOBER, 1950

Crown Copyright Reserved.

LONDON: HIS MAJESTY'S STATIONERY OFFICE
1950

Sixpence net

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director Meteorological Office.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns" =London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

Estimates of Births. England and Wales.

(a) Final estimate of live births to be expected in the **quarter ending 31st December, 1950** **160,000**

(b) Provisional estimate of live births to be expected in the **quarter ending 31st March, 1951.** **170,000**

In the above estimates regard has been had to (1) sample returns of the number of special ration books issued to expectant mothers by the Ministry of Food, and (2) the recent trend of registered live births. The sample comprises some 200 Food Office areas containing about 25 per cent. of the population.

Smallpox. England and Wales.

There were no deaths from Smallpox registered during the month of September.

Acute Poliomyelitis. England and Wales.

Weekly notifications * of acute poliomyelitis in 1950 compared with those in 1949, 1948 and 1947. *See* also Table IV.

*Not corrected for revision of diagnosis.

TABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years. (a) **London.** (b) **Great Towns in the aggregate.**

(*See Notes on page* 2)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

** Return not received.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 28th October, 1950, with totals from the first week of the year to date. } **London.**

(See Notes on page 2)

Abbreviated List No.*	Causes of Death	Deaths registered from 1st week of the year. 1950	Deaths registered during current week: All Ages.	Under 4 weeks	4 weeks—1 year.	1–5 years.	5–15 years.	15–25 years.	25–35 years.	35–45 years.	45–55 years.	55–65 years.	65–75 years.	75 years and over.

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notfication of Infectious Disease in the week ended 28th October, 1950. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page 2*)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

TABLE VII.—*continued.*

DATE. October		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	22	0.9	10.27	Cloudy all day. Slight mist in afternoon and evening.
Monday	23	0.0	10.20	Cloudy. Moderate to light rain and drizzle early morning. Mist most of day.
Tuesday	24	0.0	10.15	Cloudy until late afternoon, becoming fine. Mist in morning and evening.
Wednesday ..	25	7.6	10.08	Fine all day except for fair period about noon. Dew in morning and mist in evening.
Thursday	26	2.9	10.02	Fine early and late; fair to cloudy during day. Thick fog 05.15h.—07.45h., 22h.—24h. Frost in morning and dew in evening.
Friday	27	0.1	9.95	Fair morning and evening; cloudy in afternoon. Thick fog 0h.—02h. Frost in morning and evening.
Saturday	28	3.5	9.90	Fine early and late; fair to cloudy during day. Fog in morning with frost; mist and dew in evening.
		Sum 15.0	Sum 70.57	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h., 6h. and 9h. P.M. The readings of the barometer, dry bulb thermometer and the wet bulb thermometer are the means of 24 hourly values derived from photographic records, and the relative humidity is similarly a mean of 24 hourly values computed from the dry and wet bulb readings by means of Jelinek's Tables of Humidity. The dew point temperature is deduced from the daily means of dry and wet bulb thermometers.

The average temperature of the air is that derived from a discussion of the observations made at Kew during the 70 years ending 1940, and that of horizontal movement of the air from a discussion of the anemometric records for the 35 years ending 1915. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and − "*lower*" than the average.

The numbers in columns 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 30.27 ins. at the beginning of the week to 30.02 ins. by 14h. on 27th, and increased to 30.10 ins. by 09.10h. on 28th, and decreased to 30.04 ins. by 24h. on 28th.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns" =London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

Acute Poliomyelitis. England and Wales.

Weekly notifications * of acute poliomyelitis in 1950 compared with those in 1949, 1948 and 1947. *See* also Table IV.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 4th November, 1950, with totals from the first week of the year to date. } **London.**

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

DATE.		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
October				
Sunday	29	6.2	9.83	Fine until noon, then fair, becoming cloudy rest of day. Mist and frost in morning; mist again in evening.
Monday	30	0.2	9.77	Cloudy. Light rain afternoon and evening; moderate at times in evening. Mist morning and evening; frost in morning.
Tuesday	31	0.0	9.70	Cloudy until mid-afternoon, then fine with fog developing late afternoon, and thick by 19.30h.—24h. Dew in evening.
November				
Wednesday ..	1	0.0	9.63	Cloudy. Thick to moderate fog early; intermittent light rain in afternoon. Dew in morning, and mist in evening.
Thursday	2	0.0	9.58	Cloudy. Light to moderate rain early and in afternoon, continuing until mid-evening. Heavy at 14h. and 17.15h.
Friday	3	1.0	9.53	Cloudy. Light sleet in morning. Shower around mid-day. Fresh to strong N'ly winds 12h.—14h.
Saturday	4	0.0	9.47	Cloudy. Light rain early and intermittent at noon and in afternoon.
		Sum 7.4	Sum 67.51	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h., 6h. and 9h. P.M. The readings of the barometer, dry bulb thermometer and the wet bulb thermometer are the means of 24 hourly values derived from photographic records, and the relative humidity is similarly a mean of 24 hourly values computed from the dry and wet bulb readings by means of Jelinek's Tables of Humidity. The dew point temperature is deduced from the daily means of dry and wet bulb thermometers.

The average temperature of the air is that derived from a discussion of the observations made at Kew during the 70 years ending 1940, and that of horizontal movement of the air from a discussion of the anemometric records for the 35 years ending 1915. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and − "*lower*" than the average.

The numbers in columns 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 30.04 ins. at the beginning of the week to 29.86 ins. by 22.50h. on 30th; increased to 30.11 ins. at 19.40h. on 31st; then decreased to 29.54 ins. by 18.50h. on 2nd; and increased to 30.13 ins. by 24h. on 4th.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office.

2. Definitions of areas.—" London "=administrative county of London: " Great Towns " =London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931 ; " C.B."=county borough, " M.B."=municipal borough ; " U.D."=urban district. " Greater London "=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available :—

Monthly (a) Deaths from smallpox—about the fourth week following the month.

(b) Survey of Sickness data: Monthly Sickness rates, sickness Prevalence rates and Incapacity rates, by Quarters, with rates for the last three available months—about the last week of each month. (The usual detailed analyses will continue to be published in the Registrar General's Quarterly Returns).

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

Acute Poliomyelitis.

Weekly notifications * of acute poliomyelitis in 1950 compared with those in 1949, 1948 and 1947. *See* also Table IV.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 11th November, 1950, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 11th November, 1950. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page 2*)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

TABLE VII.—*continued.*

DATE. November		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	5	5.0	9.40	Fine in morning and late; fair to cloudy in afternoon. Fresh NNE wind 12h. Dew in morning and mist in evening.
Monday	6	0.1	9.35	Cloudy until late evening, then fine. Light rain early and around 0.9h. Dew in evening.
Tuesday	7	5 9	9.30	Cloudy early; fine in morning becoming fair in afternoon and fair again later. Frost and fog in morning; mist and fog in evening.
Wednesday ..	8	0.5	9.23	Cloudy. Fresh to strong SW winds 0.9h.—24h.
Thursday	9	0.0	9.17	Cloudy. Light to moderate rain in morning; intermittent with drizzle in afternoon and evening. Fresh SW wind 0h.—06h.
Friday	10	0.0	9.12	Cloudy. Light rain early; continuous moderate rain all morning and afternoon, heavy at 14.55h., becoming moderate to light by late evening. Mist and fog in afternoon.
Saturday	11	5.9	9.07	Fine in morning, fair in afternoon, and fine again in evening. Light drizzle early evening. Dew in evening.
		Sum 17.4	Sum 64 64	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h., 6h. and 9h. P.M. The readings of the barometer, dry bulb thermometer and the wet bulb thermometer are the means of 24 hourly values derived from photographic records, and the relative humidity is similarly a mean of 24 hourly values computed from the dry and wet bulb readings by means of Jelinek's Tables of Humidity. The dew point temperature is deduced from the daily means of dry and wet bulb thermometers.

The average temperature of the air is that derived from a discussion of the observations made at Kew during the 70 years ending 1940, and that of horizontal movement of the air from a discussion of the anemometric records for the 35 years ending 1915. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and − "*lower*" than the average.

The numbers in columns 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 30.13 ins. at the beginning of the week to 29.30 ins. by 16.20h. on 10th; then increased to 29.76 ins. by 08.15h. on 11th, and decreased to 29.46 ins. by 24h. on 11th.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available :—

Monthly (a) Deaths from smallpox—about the fourth week following the month.

(b) Survey of Sickness data: Monthly Sickness rates, sickness Prevalence rates and Incapacity rates, by Quarters, with rates for the last three available months—about the last week of each month. (The usual detailed analyses will continue to be published in the Registrar General's Quarterly Returns).

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

Acute Poliomyelitis.

Weekly notifications * of acute poliomyelitis in 1950 compared with those in 1949, 1948 and 1947. *See* also Table IV.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 18th November, 1950, with totals from the first week of the year to date. } **London.**

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

TABLE VII.—*continued.*

DATE. November		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	12	3.9	9.01	Cloudy to fair until mid-afternoon, then cloudy, becoming fine in evening. Light and moderate rain early; moderate in evening. Gust 73.8 m.p.h.:—15.40h. (SW).
Monday	13	7.2	8.94	Cloudy until about 09h., then fine. Light rain early and shower in afternoon. Gusts 73.8 m.p.h.:—12.15h.—15.45h. (W).
Tuesday	14	4.0	8.90	Cloudy until mid-evening, then fair becoming fine.
Wednesday ..	15	2.5	8.87	Fair until 09.30h., then cloudy. Moderate rain late evening. Dew in morning; mist afternoon and evening.
Thursday	16	0.0	8.80	Cloudy all day, with light to moderate rain during morning, afternoon and early evening. Mist and fog most of day.
Friday	17	3.5	8.75	Cloudy to fair until mid-afternoon, then fine, becoming fair again late. Dew morning and evening.
Saturday	18	3.7	8.68	Fine early, becoming fair to cloudy during day, and cloudy later. Showers in afternoon; light and moderate rain in evening. Fog and mist, with frost, early.
		Sum 24.8	Sum 61.95	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h., 6h. and 9h. P.M. The readings of the barometer, dry bulb thermometer and the wet bulb thermometer are the means of 24 hourly values derived from photographic records, and the relative humidity is similarly a mean of 24 hourly values computed from the dry and wet bulb readings by means of Jelinek's Tables of Humidity. The dew point temperature is deduced from the daily means of dry and wet bulb thermometers.

The average temperature of the air is that derived from a discussion of the observations made at Kew during the 70 years ending 1940, and that of horizontal movement of the air from a discussion of the anemometric records for the 35 years ending 1915. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and − "*lower*" than the average.

The numbers in columns 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 29.46 ins. at the beginning of the week to 29.07 ins. by 06.30h. on 13th; then increased to 30.00 ins. at 10.20h. on 15th; decreased to 29.43 ins. at 09.25h. on 16th; then increased to 29.95 ins. at 02.00h. on 18th; and decreased to 29.48 ins. by the end of the week.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available :—

Monthly (a) Deaths from smallpox—about the fourth week following the month.

(b) Survey of Sickness data: Monthly Sickness rates, sickness Prevalence rates and Incapacity rates, by Quarters, with rates for the last three available months—about the last week of each month. (The usual detailed analyses will continue to be published in the Registrar General's Quarterly Returns).

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

Acute Poliomyelitis.

Weekly notifications * of acute poliomyelitis in 1950 compared with those in 1949, 1948 and 1947. *See* also Table IV.

* Not corrected for revision of diagnosis.

TABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) **London.**

(b) **Great Towns in the aggregate.**

(*See Notes on page* 2)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 25th November, 1950, with totals from the first week of the year to date. } **London.**

(*See Notes on page 2*)

Abbreviated List No.*	Causes of Death	Deaths registered from 1st week of the year. 1950	Deaths registered during current week: All Ages.	Under 4 weeks	4 weeks—under 1 year.	1–4 years.	5–14 years.	15–24years.	25–34 years.	35–44 years.	45–54 years.	55–64 years.	65–74 years.	75 years and over.

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 25th November, 1950. { **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page 2*)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. B	Meningococcal infection. Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

TABLE VII.—*continued.*

DATE. November		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	19	2.7	8.65	Generally cloudy. Light rain early, showers morning and evening, heavy at 12.10h., thunder in morning. Fresh winds 11.20h.—20h., SSW—SSE.
Monday	20	3.4	8.60	Generally cloudy. Showers early, continuous moderate and heavy rain late afternoon and evening, light later. Fresh winds 06.30h.—08.45h., 10.15h.—12h., SSW, and 19h.—22h., ESE.
Tuesday	21	0.0	8.55	Cloudy. Continuous light and moderate rain in morning, light rain late afternoon and evening. Fresh W wind 14.45h.—18h.
Wednesday ..	22	0.1	8.52	Fair early morning, then cloudy. Intermittent light drizzle morning and evening, light rain in afternoon with showers. Dew in morning.
Thursday	23	0.0	8.47	Cloudy. Intermittent light rain throughout day.
Friday	24	3.5	8.42	Generally cloudy, with a fair period in morning and at noon, cloudless late evening. Fog 17.15h.—24h. Dew and frost in evening.
Saturday	25	0.6	8.38	Cloudless early. Fog all day, thick fog 07h.—10.45h., and 15.30h.—24h. Frost until mid-day, dew in evening.
		Sum 10.3	Sum 59.59	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h., 6h. and 9h. P.M. The readings of the barometer, dry bulb thermometer and the wet bulb thermometer are the means of 24 hourly values derived from photographic records, and the relative humidity is similarly a mean of 24 hourly values computed from the dry and wet bulb readings by means of Jelinek's Tables of Humidity. The dew point temperature is deduced from the daily means of dry and wet bulb thermometers.

The average temperature of the air is that derived from a discussion of the observations made at Kew during the 70 years ending 1940, and that of horizontal movement of the air from a discussion of the anemometric records for the 35 years ending 1915. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and − "*lower*" than the average.

The numbers in columns 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 29.48 ins at the beginning of the week to 28.78 ins. by 03h. on 21st, and increased to 30.07 ins. by the end of the week.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

Sickness Rates and Days of Incapacity. England and Wales.

Monthly Rates per 100 persons interviewed.

Based on the results of sample interviews carried out for the Registrar General by the Social Survey of the Central Office of Information.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 2nd December, 1950, with totals from the first week of the year to date. } **London.**

Notes: (1) The insured population entitled to claim sickness benefit consists broadly of the civilian population over school-leaving age and not retired from regular employment, who are either employed under a contract of service or self-employed (i.e., working on own account). Certain comparatively small classes (e.g., those married women, employed or self-employed, who rely on their husbands' insurance for benefit and persons who, because their employment is inconsiderable, are treated as non-employed), are not entitled to sickness benefit.

(2) The figures include cases in which the claims to benefit may be disallowed on technical grounds, but this does not impair their validity as an indication of incapacity for work as claims have to be supported by medical evidence of incapacity.

(3) The weekly averages are for periods of four weeks, except for those months marked *, which are for periods of five weeks.

TABLE VII.—*continued.*

DATE.		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
November				
Sunday	26	0.0	8.33	Overcast with fog, except for fine period at noon. Thick fog until 10.30h., and from 12.30h.—24h. Frost in morning.
Monday	27	0.5	8.30	Overcast with fog early, fine during morning, and cloudy rest of day. Light and moderate rain in afternoon and evening. Thick fog 0h.—08h.
Tuesday	28	0.6	8.25	Cloudy, except for fine period around 17h. Light to moderate rain in morning and late evening. Gusts more than 38 m.p.h.:—21.45h.. 22.10h.—23.30h., 23.50h. (SW).
Wednesday ..	29	3.8	8.22	Fair to cloudy all day. Light rain early morning and early afternoon. Gusts more than 38 m.p.h.:—00.20h.. 01.30h.. 05.15h.. 05.30h. and 12.20h. (WSW—W).
Thursday	30	3.2	8.17	Cloudy until mid-day, then fair to fine becoming cloudy again late. Gusts more than 38 m.p.h.:—10.15h., 12.29h., 12.40h., 19.10h.—20.55h. (WSW): 21.35h.. 22.30h.—22.55h.. 23.50h.—23.55h. (SW).
December.				
Friday	1	0.0	8.15	Cloudy until late afternoon, then fair for rest of day. Continuous moderate to heavy rain early until mid-afternoon. Heavy rain at 0.6h., 10.10—20h., and 16h. Gusts more than 38 m.p.h.:—00.10—30h., 01.10h.—01.15h., 01.40h., 02h.—03.15h., 04.20h.—05.25h., 07.15h., 35, 50, 08.05h. (SW); 22.55h.—23.15h. (WSW).
Saturday	2	0.0	8 10	Cloudy. Mist in afternoon. Thick fog 19.30—22h. Light rain in evening. Gusts more than 38 m.p.h.:—00.40h. (WSW). Dew in evening.
		Sum 8.1	Sum 57.52	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h., 6h. and 9h. P.M. The readings of the barometer, dry bulb thermometer and the wet bulb thermometer are the means of 24 hourly values derived from photographic records, and the relative humidity is similarly a mean of 24 hourly values computed from the dry and wet bulb readings by means of Jelinek's Tables of Humidity. The dew point temperature is deduced from the daily means of dry and wet bulb thermometers.

The average temperature of the air is that derived from a discussion of the observations made at Kew during the 70 years ending 1940, and that of horizontal movement of the air from a discussion of the anemometric records for the 35 years ending 1915. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and − "*lower*" than the average.

The numbers in columns 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer increased from 30.07 ins. at the beginning of the week to 30.32 ins. by 23.40h. on 26th, decreased to 29.35 ins. by 23 10h. on 28th, then increased to 30.05 ins. at 03.40h. on 30th, decreased to 29.35 ins. by 13.40h. on 1st, and then increased to 29.55 ins. by the end of the week.

GENERAL REGISTER OFFICE

THE REGISTRAR GENERAL'S WEEKLY RETURN FOR ENGLAND AND WALES

BIRTHS AND DEATHS, INFECTIOUS DISEASES, WEATHER

WEEK ENDED

SATURDAY, 9th DECEMBER, 1950

Crown Copyright Reserved.

LONDON: HIS MAJESTY'S STATIONERY OFFICE
1950

Sixpence net

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

SPECIAL NOTE

The form of Table V has been modified as from the current week. Figures of *new* claims to injury benefit are shown for the first time and earlier figures will be published in Appendix C of the Registrar General's Quarterly Return for Quarter ended 30th September, 1950. Earlier figures of new claims to sickness benefit have been published regularly in Table V of the Weekly Return since week ended 26th November, 1949.

Smallpox

There were no deaths from smallpox registered during the month of October.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available :—

Monthly (a) Deaths from smallpox—about the fourth week following the month.

(b) Survey of Sickness data: Monthly Sickness rates, sickness Prevalence rates and Incapacity rates, by Quarters, with rates for the last three available months—about the last week of each month. (The usual detailed analyses will continue to be published in the Registrar General's Quarterly Returns).

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

Acute Poliomyelitis.

Weekly notifications * of acute poliomyelitis in 1950 compared with those in 1949, 1948 and 1947. *See* also Table IV.

* Not corrected for revision of diagnosis.

TABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) **London.**
(b) **Great Towns in the aggregate.**

(*See Notes on page 2*)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 9th December, 1950, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 9th December, 1950. | **England and Wales, Administrative Areas and Port Health Districts.**

(See Notes on page 2)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

Notes:

(1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify for sickness benefit under the National Insurance Act without limit of income, including the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for period of five weeks.

TABLE VII.—*continued.*

DATE. December.		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	3	0.6	8.08	Cloudy, except for fair periods about 15h. and in late evening. Light and moderate snow around noon and in afternoon. Frost in evening.
Monday	4	4.4	8.05	Fair until 14h, then cloudy with light to moderate snow, becoming fair to fine in evening. Fog in afternoon; frost morning and evening.
Tuesday	5	2.7	8.02	Fine all day except for fair to cloudy period around noon. Frost all day.
Wednesday ..	6	1.9	7.98	Fine early, becoming cloudy after 10h., and fair in afternoon and evening. Frost morning and evening; fog in morning, and mist in evening.
Thursday . ..	7	2.1	7.97	Cloudy in morning and evening; fair to fine in afternoon. Fresh NNW—NW winds 11.40h., 12.35h.—14.20h. with squall and heavy shower at 11.40h. Light rain in morning.
Friday	8	0.0	7.93	Cloudy all day, with mist 10.30h.—14h. and late evening.
Saturday	9	0.1	7.90	Cloudy, except for fair period around 09h. Light drizzle, with fog, in morning, and drizzle in afternoon.
		Sum 11.8	Sum 55.93	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h., 6h. and 9h. P.M. The readings of the barometer, dry bulb thermometer and the wet bulb thermometer are the means of 24 hourly values derived from photographic records, and the relative humidity is similarly a mean of 24 hourly values computed from the dry and wet bulb readings by means of Jelinek's Tables of Humidity. The dew point temperature is deduced from the daily means of dry and wet bulb thermometers.

The average temperature of the air is that derived from a discussion of the observations made at Kew during the 70 years ending 1940, and that of horizontal movement of the air from a discussion of the anemometric records for the 35 years ending 1915. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and − "*lower*" than the average.

The numbers in columns 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer increased from 29.55 ins. at the beginning of the week to 30.07 ins. by 01.10h. on 6th, then decreased to 29.50 ins. by 11.35h. on 7th, increased to 30.23 ins. by 11.00h. on 9th, and decreased to 30.14 ins. by the end of the week.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review. Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

SPECIAL NOTE

The form of Table V has been modified as from week ended 9th December, 1950. Figures of *new* claims to injury benefit are shown and earlier figures will be published in Appendix C of the Registrar General's Quarterly Return for Quarter ended 30th September, 1950. Earlier figures of new claims to sickness benefit have been published regularly in Table V of the Weekly Return since week ended 26th November, 1949.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available :—

Monthly (a) Deaths from smallpox—about the fourth week following the month.

(b) Survey of Sickness data: Monthly Sickness rates, sickness Prevalence rates and Incapacity rates, by Quarters, with rates for the last three available months—about the last week of each month. (The usual detailed analyses will continue to be published in the Registrar General's Quarterly Returns).

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Civilian death-rates from Tuberculosis and Cancer and also Maternal Mortality—about the end of April.

Acute Poliomyelitis.

Weekly notifications * of acute poliomyelitis in 1950 compared with those in 1949, 1948 and 1947. *See* also Table IV.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

** Return not received.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 16th December, 1950, with totals from the first week of the year to date. } **London.**

Notes:

(1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify for sickness benefit under the National Insurance Act without limit of income, including the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for period of five weeks.

TABLE VI.—Air Temperature and Rainfall in the week ended 16th December, 1950.

Certain Great Towns in England and Wales and four Scottish and Irish Towns.

SOUTHPORT.
GREAT BRITAIN
22 DEC 50

DATE. December.		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	10	0.0	7.88	Cloudy. Continuous light rain and drizzle in morning and evening, with squall and moderate shower in afternoon.
Monday	11	5.8	7.87	Fine, except for fair periods from 12.30h.—14.15h., and late evening. Frost morning and evening, fog early evening.
Tuesday	12	5.6	7.85	Fine until about 14.30h., then fair, becoming cloudy. Fog in evening. Frost morning and evening.
Wednesday ..	13	0.0	7.83	Cloudy, with fog until mid-evening. Light snow about 09h. Frost morning and evening.
Thursday	14	0.3	7.82	Cloudy to fair early morning; cloudy until mid-evening, then fair. Light to moderate snow in afternoon and early evening.
Friday	15	0.0	7.80	Cloudy until late afternoon, then fine. Continuous light to moderate snow morning and early afternoon. Snow lying at 09h. = 1 cm.
Saturday	16	4.0	7.78	Fair to fine all day. Mist in morning. Snow lying at 09h. = 3 cms.
		Sum 15.7	Sum 54.83	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h., 6h. and 9h. P.M. The readings of the barometer, dry bulb thermometer and the wet bulb thermometer are the means of 24 hourly values derived from photographic records, and the relative humidity is similarly a mean of 24 hourly values computed from the dry and wet bulb readings by means of Jelinek's Tables of Humidity. The dew point temperature is deduced from the daily means of dry and wet bulb thermometers.

The average temperature of the air is that derived from a discussion of the observations made at Kew during the 70 years ending 1940, and that of horizontal movement of the air from a discussion of the anemometric records for the 35 years ending 1915. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and − "*lower*" than the average.

The numbers in columns 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 30.14 ins. at the beginning of the week to 29.27 ins. by 01.05h. on 14th, then increased to 29.73 ins. by the end of the week.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

Sickness Rates and Days of Incapacity. England and Wales.

Monthly Rates per 100 persons interviewed.

Based on the results of sample interviews carried out for the Registrar General by the Social Survey of the Central Office of Information.

* Not corrected for revision of diagnosis.

ABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) **London.**

(b) **Great Towns in the aggregate.**

(*See Notes on page* 2)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

‡Dublin	**	**	**	**	**	**	**	**	**	**	**	**

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

** Return not received.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 23rd December, 1950, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 23rd December, 1950. } **England and Wales, Administrative Areas and Port Health Districts.**

(See Notes on page 2)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

Notes:

(1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify for sickness benefit under the National Insurance Act without limit of income, including the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for period of five weeks.

TABLE VII.—*continued.*

DATE. December.		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	17	0.0	7.77	Cloudy. Continuous light snow in morning; light to moderate in afternoon. Fresh NW wind 11h.—21.30h.
Monday	18	0.0	7.75	Cloudy. Light snow in afternoon, moderate sleet late afternoon, light rain in evening. Fog 08h. until late. Thick fog 16.30h.—22h.
Tuesday	19	0.0	7.75	Cloudy. Mist in morning, and fog in afternoon. Thick fog 15.45h.—21.45h.
Wednesday ..	20	0.0	7.75	Cloudy. Fog and mist in very early morning.
Thursday .. .	21	1.8	7.75	Cloudy in early morning, then fair. Cloudy at mid-day and afternoon; overcast in evening. Fog during morning and afternoon; mist in evening.
Friday .. .	22	0.0	7.75	Cloudy. Intermittent light snow at 11.30h. Fresh SE wind 03h.; E at 09 30h., 14.30h.—18.30h. and at 21h. Frost in morning.
Saturday	23	0.0	7.75	Cloudy all day. Fresh NE wind 08h.—10h. Mist in morning, afternoon and early evening.
		Sum 1.8	Sum 54 27	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h., 6h. and 9h. P.M. The readings of the barometer, dry bulb thermometer and the wet bulb thermometer are the means of 24 hourly values derived from photographic records, and the relative humidity is similarly a mean of 24 hourly values computed from the dry and wet bulb readings by means of Jelinek's Tables of Humidity. The dew point temperature is deduced from the daily means of dry and wet bulb thermometers.

The average temperature of the air is that derived from a discussion of the observations made at Kew during the 70 years ending 1940, and that of horizontal movement of the air from a discussion of the anemometric records for the 35 years ending 1915. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and − "*lower*" than the average.

The numbers in columns 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer increased from 29.73 ins. at the beginning of the week to 30.11 ins. by 23h. on 19th, then decreased to 29.55 ins. by 14.50h. on 22nd, and increased to 29.91 ins. by the end of the week.

K.898 K.13 12/50. Wt. 6—Ps. 61. R.J. & Co. S. G.437 (Emergency).

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of births and deaths and Medical Officers of Health respectively. The figures of *new* claims to sickness benefit made under the National Insurance Act, 1946, shewn in Table V are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied to the Registrar General by the Director, Meteorological Office.

2. Definitions of areas.—"London"=administrative county of London: "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1931; "C.B."=county borough, "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually, those for Greater London, London and the County Boroughs are distinguished separately in Tables 24 and 24A of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

Acute Poliomyelitis. England and Wales.

Weekly notifications * of acute poliomyelitis in 1950 compared with those in 1949, 1948 and 1947. *See* also Table IV.

* Not corrected for revision of diagnosis.

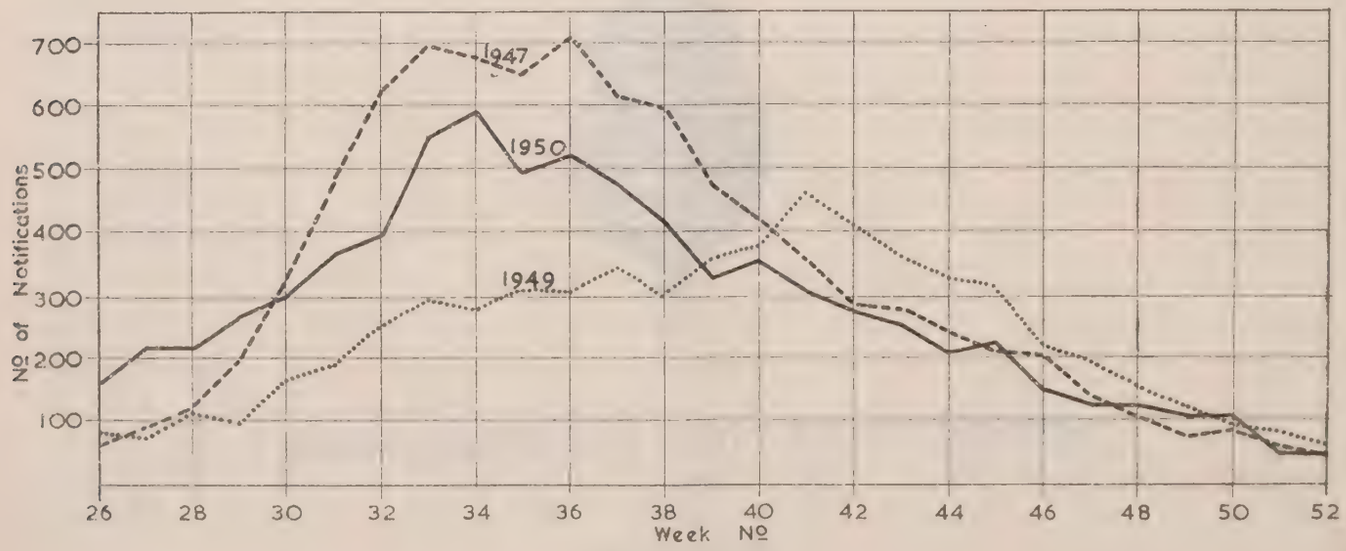

TABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) London.

(b) Great Towns in the aggregate.

(*See Notes on page* 2)

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g. in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 30th December, 1950, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Disease in the week ended 30th December, 1950. } England and Wales, Administrative Areas and Port Health Districts.

(See Notes on page 2)

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. B	Meningococcal infection. D	Acute poliomyelitis: Paralytic E	Acute poliomyelitis: Non-paralytic F	Acute encephalitis: Infective G	Acute encephalitis: Post Infectious K	Typhus fever. H	Relapsing fever. I	Continued fever. (London only). J	Dysentery. L	Ophthalmia neonatorum. M	Puerperal pyrexia and Puerperal fever. N C	Smallpox. O	Paratyphoid fever. P	Typhoid fever. R	Food poisoning. S

Notes:

(1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify for sickness benefit under the National Insurance Act without limit of income, including the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for period of five weeks.

TABLE VII.—*continued.*

DATE. December.		Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
Sunday	24	0.0	7.75	Cloudy until about 10h., then overcast with fog until late evening. Intermittent light drizzle in morning and afternoon.
Monday	25	0.0	7.75	Cloudy all day. Intermittent light drizzle early and in morning; light rain mid-evening. Fog from 11h. to mid-afternoon.
Tuesday	26	0.0	7.75	Cloudy all day; light shower in late afternoon.
Wednesday ..	27	0.0	7.77	Cloudy all day. Light snow, then continuous light sleet from noon to mid-evening. Fresh NE winds 06.30h.—07.30h., 08h., 09.30h., and 10.30h.—22h.
Thursday	28	1.3	7.78	Cloudy until mid-afternoon, then fair, becoming fine. Intermittent light snow early morning. Fresh NE wind 08h.—11.30h., 13h.—16h.
Friday	29	0.0	7.80	Cloudy all day. Frost and mist in morning.
Saturday	30	3.8	7.82	Cloudy most of day, except for fair periods from about 10h.—13.30h., and from early to mid-evening. Intermittent light snow late evening.
		Sum 5.1	Sum 54.27	
No. of Column		25	26	

The results apply to the civil day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h., 6h. and 9h. P.M. The readings of the barometer, dry bulb thermometer and the wet bulb thermometer are the means of 24 hourly values derived from photographic records, and the relative humidity is similarly a mean of 24 hourly values computed from the dry and wet bulb readings by means of Jelinek's Tables of Humidity. The dew point temperature is deduced from the daily means of dry and wet bulb thermometers.

The average temperature of the air is that derived from a discussion of the observations made at Kew during the 70 years ending 1940, and that of horizontal movement of the air from a discussion of the anemometric records for the 35 years ending 1915. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and − "*lower*" than the average.

The numbers in columns 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer increased from 29.91 ins. at the beginning of the week to 30.17 ins. by 22.50h. on 25th, decreased to 30.06 ins. by 16.40h. on 27th, then increased to 30.15 ins. by 20.50h. on 28th, and decreased to 29.65 ins. by the end of the week.
